CORNUS FLORIDA FLORE RUBRO
RED-FLOWERED DOGWOOD.

The White-flowered Dogwood is so well-known that it would seem unnecessary to give a description of the beautiful Red-flowered variety other than to say that it is exactly like the parent form, with the exception of its attractive pink flowers.

While the chief difference consists in its having rich pink-colored flowers, there are minor ones as well. The leaves are of a darker green, it is of more compact growth, and it flowers when quite young. It is a common occurrence to find flowers on two or three year old plants.

As with the parent form, it is perfectly hardy. It can be planted in any position where a small-sized, bushy tree, of not over twenty to twenty-five feet in height, would be in place.

The Red-flowered, White-flowered and Weeping Dogwood form a beautiful and interesting group.

ACER POLYMORPHUM
ATROPURPUREUM
BLOOD-LEAVED JAPANESE MAPLE.

This is probably the finest plant ever introduced from Japan. In the spring, when the foliage is fairly expanded, it is of a deep blood-red color, and this hue is maintained to a great extent throughout the season. Its compact, bushy growth affords an opportunity to use it anywhere, no matter how small a place may be. Like

many other bushy growers, it increases slowly in size, and even when full grown, it is but from twelve to fifteen feet in height, and about the same in width. While used largely as a shrub on the lawn, it is frequently planted to form a bed, or with other Japanese sorts in groups. A bed of it or of mixed kinds always commands attention.

VIBURNUM PLICATUM
JAPANESE SNOWBALL.

The Japanese Snowball is one of the few popular shrubs that combine beautiful flowers with rich and ornamental foliage, and that are always used when there is room for but a few of the choicest kinds.

This attractive Snowball forms an upright-growing bush of beautiful outline, quite different from the spreading habit of the common one. The young shoots, both wood and leaves, have a distinct, coppery color, and when the leaves are fully expanded they become of a rich dark olive green, remaining this way until the very last thing in the fall. The foliage contrasts nicely with the flowers, and with that of other shrubs which may be near it.

Either set out singly or planted in groups, nothing exceeds it in beauty.

Fagus Sylvatica Asplenifolia, Fern-Leaved Beech.—See page 15.

DIRECTIONS TO CORRESPONDENTS.

TELEPHONE.—We have telephone connections, and can also be reached over the LONG DISTANCE TELEPHONE.

PRICES.—The prices contained herein are the lowest we offer. Five or fifty plants of any one sort sold at the ten or hundred rates respectively. When more than two hundred and fifty plants of any one sort are required, a special rate may be had on inquiry.

STOCK SELECTED by customers, at the Nurseries, will be charged for at advanced rates, according to the value of the trees chosen.

BOXES AND PACKING will be charged for; but only a sufficient sum to cover the cost of time and material consumed. Our packing is done in the very best manner, and by our method large trees can be shipped in bales to long distances in perfect safety. We advise boxes, however, whenever possible. When no packing directions accompany the order, we use our own judgment in the matter.

SHIPPING.—For small orders, shipment by Express is preferable,—but for long distances, freight is quite as good. It must be remembered that freights are very slow, and ample time must be allowed us in shipping goods in this way.

CASH WITH ORDER.—Customers who have not dealt with us heretofore should send cash with order,—old customers can, if they wish, remit on receipt of goods and invoice. All accounts are due, *net cash*, as soon as goods are delivered.

REMITTANCES should be made by Post Office Money Order, payable at "Station G," Philadelphia, or by drafts or checks on Philadelphia or New York banks, or by registered letter Postage Stamps accepted for small amounts.

ORDER EARLY.—Much time can be saved in the shipping season if customers would prepare and forward their orders before the first of April. Every attention, however, will be accorded those sending their orders after that time.

SHIPPING SEASON.—We usually commence shipping about the 15th of March,—the season rarely closes before the 10th or 15th of May.

VISITORS are cordially invited to inspect our stock. They should take the train at Twelfth and Market Streets, getting off at Walnut Lane Station; or at Broad and Market Streets, for Carpenter Station. Cabs can be had at either station if desired. The Eighth Street and Germantown Avenue electric cars come within three squares of our nurseries. Leave cars at Church Street (Pelham) Germantown.

PREFACE TO 20th EDITION.

Just forty-four years ago Thomas Meehan, the senior member of the present firm, commenced the nursery business here at Germantown, with but three acres of ground and almost no capital. From the first he saw that in time to come there would be a growing demand for Ornamental Trees, Shrubs and Evergreens of every description,—not only for large private places, but for Parks and Cemeteries, and he determined to shape his business with that idea in view. At that time there was little or no demand for Ornamental Trees, outside of a few of the commoner sorts.

That he was wise in reaching such a decision, and adhering to his belief in a future for such a class of goods, is proven by the extensive plant now conducted by Mr. Meehan and his sons. Seventy-five acres are closely planted with all that is good and desirable. The newest trees and shrubs are imported annually from all important growers in the world, and thoroughly tested as to their value before being offered to their customers. Every care is exercised that all stock sent out is exactly as represented, strong, thrifty, healthy and well rooted, and every effort is exerted that all dealings shall be satisfactory to their customers. This policy has been strictly adhered to, with the result that not only do their customers continue with them from year to year, but they recommend their friends to deal at these nurseries also.

Three years ago it was found necessary to increase the acreage to accommodate the continued demand for this higher class of stock,—sixty-five additional acres were then added, and this is rapidly being planted with shade and ornamental trees.

Scientific and practical knowledge have been combined to make this the most complete nursery of its kind in the United States. The success achieved has been very great,—superintendents of parks, cemeteries and large estates coming annually to this place to replenish their stock.

The firm believes in furnishing customers with vigorous trees, having an abundance of roots, and for this purpose there are annual applications of manure to the trees, frequent transplanting and thorough cultivation continually.

LANDSCAPE GARDENING AND ENGINEERING.

Platanus orientalis, Oriental Plane.

Bed of Evergreens at Horticultural Hall, Fairmount Park, Phila.

Landscape gardening is an art, and cannot be taken up lightly by the novice with the expectation of achieving great success unless he has a natural gift for it. One must have the power of seeing in the mind from the very beginning not only the appearance of the work when completed, but what the result will be in after years when the trees and shrubs have attained their growth.

Natural beauties must be retained or brought out more strongly, vista's opened where obscured by natural growth, or preserved when new plantings are to be made, and trees of large and small growth located where they will be of the most service.

Every style of architecture requires a certain arrangement in the planting that the one may be in perfect harmony with the other.

Not only, therefore, must one have the gift for creating what may be termed a beautiful picture, he must have as well a thorough practical knowledge of trees and shrubs, that they may be properly placed in the general planting arrange-

ment. How often it is that instead of setting groups of dwarf trees so that an uninterrupted view of some distant point may be secured, large growing ones are carelessly planted in the same situation, or groups of trees that ought to be arranged to produce the effect of a large expanse of lawn, give an entirely opposite result.

The Landscape Engineering Department of this firm is under the personal direction of our Mr. J. Franklin Meehan. Through him we prepare and carry out plans for grading, roadmaking, planting and the remodelling of old places, and, in fact, every branch of this work. From our long experience as nurserymen we feel we are especially fitted to give information upon the subject of trees, shrubs and forestry.

Our charges for the work are moderate and plans are carried out on most favorable terms. Special arrangements made when extensive work is contemplated. Correspondence solicited. **THOMAS MEEHAN & SONS.**

HINTS ON TREE PLANTING AND PRUNING.

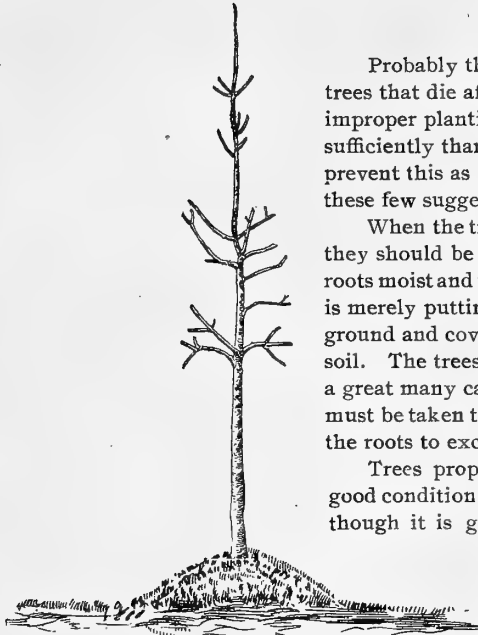

Fig 1.—Tree planted in a mound where proper drainage cannot be secured in the subsoil.

Should the plants become frozen in transit, no injury will occur if the box or bale be placed in a dark cellar or covered over with straw or similar material and allowed to thaw out, without being exposed to the light, air, or any artificial heat.

Soil.—Successful planting depends to a great extent upon the soil. While a tree will stand almost any amount of water, it cannot exist if water remains about the roots,—good drainage must be had.

Water will not pass through clay soil, and where the soil is such, a hole should be dug sufficiently deep to pass through the clay to the sand below. Where the clay is too deep for this, other means of drainage must be provided, either by stone drains (tile drains will soon choke up with roots) or by digging very large holes, three or four feet deep, and as wide or wider, and the bottom filled with broken stone or ashes.

Another method of planting when the soil is of this character is to loosen the soil for a foot or so deep, but do not dig a hole. Place the tree on the top

Probably the loss of the larger number of trees that die after transplanting is due more to improper planting and the neglect to prune them sufficiently than to any other cause, and it is to prevent this as much as possible that we offer these few suggestions.

When the trees are received from the nursery they should be “heeled in” in order to keep the roots moist and free from the air. “Heeling in” is merely putting the roots temporarily in the ground and covering them with a thick layer of soil. The trees are “heeled in” closely, so that a great many can be put in a small space. Care must be taken to pack the earth in tightly against the roots to exclude the air.

Trees properly “heeled in” will keep in good condition for several weeks, or even longer, though it is good policy to have the ground prepared in advance, so that trees may be planted at once upon their arrival, and only “heeled in” until all can be permanently set out.

of the ground and fill up around it with good soil. This will set the tree in a mound. (See figure 1).

Always dig a larger hole than the roots require, even if it is not filled in with new soil, as it is essential that the ground should be loosened up to allow good drainage and plenty of moisture. Loose ground absorbs the moisture much quicker than when it is undisturbed. For an ordinary sized tree, say ten to twelve feet in height and one and one-half to two inches in diameter, the hole should be made at least three feet in diameter and two feet deep.

If possible, cart away all the earth taken out and bring new top soil and manure in which to plant the tree,—about one-fourth well rotted manure and three-fourths of top soil.

If any roots are broken, cut them off smoothly with a sharp knife; they will more quickly callous when the surface is smooth.

Set the tree in the hole to about the same depth, or a trifle deeper than it was in the nursery,—the discoloration above the roots will indicate the point. Fill in about the roots slowly, being careful should the tree have a great number of fibrous roots, to work the earth well in among them and under the butt of the tree. Fine soil free from larger stones or clods of earth should be used for this.

Take a good stout rammer and pack the earth in as tightly as possible as it is gradually filled in about the tree.

If the earth is filled in too fast it cannot be packed tight enough. The idea is to press the earth as close to the roots as possible, so that there will be no air between them and the soil, and that the close pressing soil will enable the roots to take moisture from it. There is no danger of packing the soil too hard.

Fig.2.—Showing proper pruning of freshly planted trees. Also the fibrous roots of the Pin Oak.

Pruning.—This is an essential feature, and yet it is frequently overlooked by amateurs. A great many trees fail from exhaustion from lack of pruning. A vigorous tree has enough roots to supply it with all the sap it needs; but as soon as it is transplanted it is unable to draw moisture from the earth until new roots are made, and it again becomes established. All this time the branches and leaves are drawing on what sap there is in the tree, and when this becomes exhausted, if new roots have not yet grown, the tree dies. This explains why trees die after they have pushed into leaf, and, in fact, sometimes into growth.

All trees need more or less pruning when transplanted; just how much depends a great deal on the tree to be pruned. A maple, poplar, birch or elm will do with very little pruning, while an oak, beech, chestnut, walnut or ash requires severe cutting. The roots which a tree has must also be taken into consideration. If it is well furnished with roots and fibres, it will require less pruning than if it has but a few stout roots devoid of fibres. (See Fig. 2).

In a general way, it may be said that hard wooded trees require severe pruning, while those having a soft, sappy wood need but a light pruning. This

does not always apply. A Pin Oak has very fibrous roots, as a rule, and moves quite easily without much pruning, though some will consider it advisable to do severe cutting even in its case. On the other hand, the larch, which has a very soft, sappy wood, but practically no fibres, and, in fact, but little root, must be pruned closely, to get it to transplant well.

Mulching.—This consists of putting a thick layer of straw, hay or well rotted manure on the surface of the ground about the tree, covering the earth disturbed when the tree was planted. It should be put on at least three or four inches thick.

Manure makes the best mulch, as it acts as a fertilizer as well,—the rains washing its substance down to the roots from time to time.

We advise mulching for both Spring and Fall planted trees and shrubs. It prevents the drying out of the soil and retains moisture during the summer, and in winter the frost does not penetrate as deep as would otherwise be the case.

More might be written on this subject; but we think what we have stated will be sufficient. In short, the vital points are,—a large hole, good soil tightly packed about the roots, ample pruning and a good mulching.

PRUNING OF FLOWERING SHRUBS.

In the winter season much of the pruning of flowering shrubs is performed, and usually the operation takes with it all the flower buds that should clothe the plant with a mass of bloom during the spring and early summer. This is because gardeners do not consider the flowering habits of the various shrubs with which they have to deal. To prune away, in winter, the young wood from a Weigela, Deutzia, Mock Orange, Lilac, or Bush Honey-suckle, takes with it all the bloom for the following spring. This is usually the case, however, when indiscriminate pruning is practiced.

There are very few shrubs that may be severely cut in winter. The Hardy Hydrangea, Althæa, and some smaller shrubs like the Hypericum, form their flower buds on the young growth made in the summer of the same year they bloom, but nearly all other shrubs make their flower buds on the young growth made the season previous to their expanding.

The proper system of pruning is one that will induce an abundance of young wood, and this can only be accomplished by the trimming out of all two year old growth,—that which has already flowered,—cutting out the old shoots close to the ground, so that the new growth will push out from the root of the plant. If the bush make too strong and rank a growth, a moderate amount of pruning in winter will not lessen the bloom to any extent, especially as the extreme ends of the young wood do not flower.

Summer pruning of flower shrubs is practiced by some gardeners with success,—after the plants have done blooming,—but in this case it must be done with great care, as the cutting away of wood when in full leaf tends to weaken the plant, while the object to be gained is to foster a strong and vigorous growth.

Deutzia scabra—Unpruned.

Deutzia scabra—Properly pruned.

DECIDUOUS TREES.

"SEED" indicates that the stock is in the original seed-beds.

"TRANS." indicates transplanted stock.

FIGURES IN BRACKETS indicate about the height of the tree when at from twenty-five to thirty years of age.

ACACIA. Mimosa Tree.

Acacia Julibrissin. (10 to 15 ft.) A low growing, spreading tree, with feathery foliage. Requires protection north of Philadelphia.

10 to 15 in. Seed	\$ 25 each	\$1 00 per 10	\$7 50 per 100
4 to 5 ft. Trans.....	75 "	6 00 " 10	

ACER. Maple.

There are but few trees as popular as Maples. For street, avenue and other places where shade is required, the Silver, Norway, Sycamore, Red and Sugar are invaluable. The Silver is the fastest grower of all; but for permanency the others are sometimes preferred.

Acer campestre. European Cork Maple. (20 to 25 ft.) A small sized tree, with round or spreading head, and handsome, neat foliage. Can be grown as a large shrub if desired. Valuable for grouping or for planting on high, dry ground, where it thrives especially well.

6 to 10 in. Seed.....	\$ 25 each	\$ 50 per 10	\$3 00 per 100
4 to 5 ft. "	35 "	2 00 " 10	15 00 " 100
5 to 6 ft. Trans.....	75 "	6 00 " 10	

" **dasycarpum.** Silver Maple. (50 to 60 ft.) One of the best of trees when very quick growth, large size and light foliage are required. Trimmed moderately, annually, it becomes of fine shape. A beautiful ornamental tree if given ample room to develop. It is particularly useful for planting on wide streets or avenues, and especially so on building sites, where it is desirable to get a large growth as quickly as possible. We recommend it for this purpose rather than the Carolina Poplar, which is now so largely used.

18 to 24 in. Seed.....	\$ 25 each	\$1 00 per 10	\$ 6 00 per 100
10 ft. Trans.....	50 "	4 00 " 10	30 00 " 100

14 ft. 2½ "	2 25 "		

" **var. Wierii.** Wier's Cut-leaved Silver Maple. (35 to 40 ft.) This remarkably beautiful tree has a partly drooping habit and finely divided leaves. It is a rapid grower and an excellent lawn tree; it is desirable also for lining carriage drives, and is used occasionally for street planting.

6 ft. "	\$ 65 each	\$5 00 per 10	\$40 00 per 100
10 to 12 ft. 1½ in. diam.....	1 50 "	13 50 " 10	
12 ft. 2 "	2 00 "		

PRICES:—Five plants of any one variety of the same size furnished at the rate per 10. Fifty at the rate per 100. When 250 or more are required, a special price will be given by letter.

TREES SELECTED by customers in the nurseries will be charged for accordingly. When customers do not specify the size or price of the tree wanted, it must be taken for granted that the selection of a suitable size is left to our judgment.

Acer lætum (colchicum rubrum.) (25 to 30 ft.) A large sized species from Japan, making a medium sized tree. The young growth of both wood and foliage is of a brilliant red, and when mature, of a shining green. The foliage remains on the tree until late fall without changing color. By cutting down once or twice, a large bushy tree can be had. It is also a valuable street tree south of Philadelphia.

2 to 3 ft. Trans.....	\$ 35 each	\$2 50 per 10	\$18 00 per 100
4 to 6 ft. "	50 "	4 00 " 10	30 00 " 100

" **macrophyllum.** Oregon Maple. (35 to 40 ft.) This fine tree has foliage much like the European Sycamore Maple, a tree which it much resembles in other respects as well, excepting that it is a more round-headed tree.

2 to 3 ft. Seed.....	\$ 25 each	\$1 50 per 10	
----------------------	------------	---------------	--

" **obtusatum.** A species from Southern Europe, of medium growth, and with fair sized foliage. A pretty, ornamental tree.

8 to 12 in. Seed.....	\$ 25 each	\$1 50 per 10	
-----------------------	------------	---------------	--

" **platanoides.** Norway Maple. (40 to 50 ft.) A large, handsome, round-headed tree, bearing numerous large, dark green leaves, which remain on the tree until late in the fall. Extremely valuable for street and avenue planting, and for lawns, where a spread-tree is wanted.

2 to 3 ft. Seed.....	\$ 25 each	\$ 75 per 10	\$5 00 per 100
4 to 5 ft. "	25 "	1 25 " 10	10 00 " 100
8 to 9 ft. Trans.....	50 "	4 00 " 10	30 00 " 100

" **trilobatum (monspessulanum).** (7 to 10 ft.) This is of but medium growth with us. The leaves though smaller, remind one of the Sycamore Maple.

18 to 24 in. Trans.....	\$ 35 each	\$3 00 per 10
2 to 3 ft. ".....	50 "	4 00 " 10
4 to 5 ft. ".....	75 "	6 00 " 10

JAPANESE MAPLES.

The Japanese Maples are so shrub-like in growth, and, many of them, of such beautiful colors, that we class them by themselves. Because of these characters they are much used for forming permanent beds for color in summer. The blood-leaved, atropurpureum, is very much in demand. In groups, they can be planted about four feet apart.

Acer Japonicum. Japanese Maple. (10 to 15 ft.) This is a slow growing sort, with dark green leaves.

18 to 24 in. In pots.....	\$1 50 each	\$13 50 per 10
3 to 4 ft. ".....	2 00 "	17 50 " 10

" **var. aureum.** Golden-leaved. (8 to 10 ft.) A golden-leaved variety of the above, one of the most desirable sorts, and quite scarce.

18 to 24 in. In pots..... \$1 75 each \$15 00 per 10

" **var. lætum.** (12 to 15 ft.) This variety produces young leaves of a deep red, which give way to green later on; of larger growth than the other sorts.

BETULA ALBA LACINIATA.

(Cut-leaved Weeping Birch.)

This is one of the most graceful of all the Birch. The leading shoot grows perfectly straight and the main branches are the same as those of the common European White Birch, but the twigs are quite light and have a beautiful pendulous habit

On this account, and because of its beautiful cut leaves it is highly esteemed.

It is particularly useful for planting as a single specimen or in groups on the lawn,—or for a specimen tree in a cemetery.

Betula alba fastigiata. Pyramidal White Birch. (35 to 40 ft.) A pyramidal sort, of compact growth, with the same white bark as the type. A fine sort for ornamental planting.

4 ft. Trans..... \$1 00 each
5 to 6 ft. " 1 50 "

" **var. laciniata.** Cut leaved Weeping Birch. (35 to 40 ft.) Deservedly the most popular of weeping trees. It is of slender, yet vigorous growth, has finely divided leaves on drooping branches, besides possessing beautiful white bark. The leader continues to ascend, consequently it makes a tall growing tree.

CERASUS. Cherry.

(Wild forms.)

Cerasus Padus. European Bird Cherry. (25 to 30 ft.) A very handsome tree, of large-spreading habit, clothed in May with long spikes of white flowers, followed by black berries. It is often grown in bush shape, though of tree size. It is one of the prettiest of ornamental trees, and should be largely used. Can be grown either as a bush or a tree.

12 to 15 in. Seed.....	\$ 25 each	\$1 00 per 10	\$6 00 per 100

DIMORPHANTHUS.

Dimorphanthus Mandshuricus. (Aralia.) (15 to 20 ft.) The description of Aralia spinosa almost fits this tree. This one, however, grows rather taller than Aralia, and its immense panicles of white flowers are produced towards the close of July, a week or more in advance of Aralia. As it suckers from the root it should be planted where a large clump of it can be formed.

3 to 4 ft.	Trans.....	\$ 35 each	\$3 00 per 10
4 to 5 ft.	"	50 "	4 00 "

FAGUS. Beech.

Beeches have long been deemed indispensable to the landscape gardener. Their glossy foliage, the pendulous habit of the Weeping, finely cut leaves of the Fern-leaved and the purple of the Blood-leaved, are what entitle them to this distinction. The white bark of the American is in nice contrast with the darker hue of the English and its varieties. Like all hard wooded trees, they require severe pruning when transplanted.

Fagus Americana. American Beech. (40 to 50 ft.) A magnificent tree, of large, round, spreading growth. Conspicuous for its almost white bark. On lawns it is usually allowed to grow branched close to the ground, thus making a beautiful specimen. Prune close when transplanted.

2 to 3 ft. Seed.....	\$ 25 each	\$1 00 per 10	\$8 00 per 100
2 to 3 ft. Trans.....	35 "	2 50 " 10	15 00 " 100

5 ft. ".....	1 25 "	10 00 " 10	70 00 " 100
10 ft. Heavy. Trans. Specimens...	\$3 00 to 5 00 "		

sylvatica. European or English Beech. (40 to 50 ft.) This also makes a large, spreading tree, but of more compact habit, and is much admired for its shining green foliage. It is sometimes grown as a large bush, and as its foliage, though dead, remains on all winter, it is a good deal used for screening purposes. It also makes an excellent ornamental hedge, and is largely used in New England in this way. Requires pruning when moved.

12 to 15 in. Seed.....	\$ 25 each	\$ 75 per 10	\$6 00 per 100
2 to 3 ft. Trans.....	35 "	2 50 " 10	15 00 " 100

FAGUS SYLVATICA PENDULA.

(Weeping Beech.)

The Weeping Beech is adapted for planting with groups of other trees as well as for single specimens.

The unique character of growth,—which is usually more distorted than is shown in the illustration, gives it a distinction unoccupied by any other weeping tree.

The remark is often made that as a single tree it is ugly, but it is exactly this feature that makes it valuable. The regular outlines of other trees makes it necessary to plant something to break the monotony, to give relief from these regular lines and it is then that the Weeping Beech is most useful.

A unique effect is produced by planting three in a group a few feet apart.

Fraxinus anomala. A new species, from Utah, with rather larger foliage than usual with Ashes.

MAGNOLIA. Native Sorts.

It would be difficult to over praise Magnolias,—they make beautiful trees for ornamental planting, and the acuminata and tripetala are also valuable as street and avenue trees. The leaves are large, dark green, and the flowers white. Nearly all bear large and conspicuous fruit pods,—the tripetala being especially handsome in this respect. They should only be transplanted in the spring and closely pruned.

Magnolia acuminata. Cucumber Tree. (30 to 35 ft.) One of the largest growing of Magnolias, and of rapid growth. It makes a pyramidal tree of much beauty. The flowers are yellowish white, and expand towards the close of May. The cucumber-like pods of seeds become of a carmine color in the fall. It is a very hardy sort, thriving alike in the mountains of Pennsylvania or in the low lands of Ohio. Prune well when transplanting.

Magnolia Fraseri. (Auriculata.) (35 to 40 ft.) A rare and beautiful tree-growing species from the mountains of North Carolina. It is a rapid grower and forms a symmetrical shaped tree. The leaves are moderately large and of good color. The flowers are as large as those of the Chinese sorts, lemon yellow in color and very sweet scented. They do not all open at one time and consequently the blooming period is extended over a period of four to five weeks, commencing about the middle of May. Quite rare in cultivation. Plant as a single specimen or in groups with trees of similar growth. Prune closely when transplanting.

" **glauca.** Sweet Bay. (15 to 20 ft.) The sweet white or New Jersey Magnolia, as this is often times called, is greatly prized for its beautiful white, sweet scented flowers. These flowers come later than those of most all other kinds, not expanding until the first week in June. In sheltered places it is almost or quite an evergreen. While it grows in swamps and low ground in its native state, it does equally as well in higher situations. There are many fine specimens in perfect health that bloom profusely planted in the high and dry ground in Pittsburgh, Pa. Use as specimen plant, in groups on the lawn or for massing in low ground or along the borders of woods. Prune closely when transplanting.

MAGNOLIA. Chinese and Japanese Sorts.

The Chinese and Japanese sorts are not as large growing as the native ones; their maximum height being about twenty to thirty feet. They can either be trimmed up to a single stem,—tree form,—or allowed to grow bushy as a shrub, in which form the maximum height would not be over ten to fifteen feet. When wanted in tree form it should be so stated when ordering. Magnolias should be severely pruned when transplanted, and, unless they have been in pots, only moved in spring.

Magnolia Alexandrina. (10 to 12 ft.) This is one of the shrub kind, producing large, light pink flowers in the first week of May.

12 to 18 in.	Trans.....	\$ 35 each
4 to 5 ft.	".....	75 "

Crataegus Oxyacantha, English Hawthorn.—For prices, see page 34.

DOWNING'S EVERBEARING MULBERRY.

Mulberries are not planted as much as they should be. A great deal has been done in the last few years to improve them both in size and flavor, but the Downing is undoubtedly the best of all the newer kinds. It is of large size, deep black, and as the fruit does not ripen all at one time the period of fruiting extends from early June to the end of September. See prices page 20.

PLATANUS. Plane. Sycamore.

Platanus occidentalis. American Plane. (50 to 60 ft.) One of the largest growing of our native trees.

2 to 3 ft.	Seed.....	\$ 25 each	\$1 50 per 10
------------	-----------	------------	---------------

" var. laciniata. (40 to 50 ft.) A cut leaved variety of the above.

3 to 4 ft.	\$ 50 each	
------------	-------	------------	--

" orientalis. Oriental Plane. (40 to 50 ft.) A favorite avenue tree in Europe, and being much planted here for the same purpose. So far it has escaped the attacks of insects in cities. It forms a large, spreading tree, and cannot be too highly recommended when a large, rapid growing tree is wanted. Thrives in either high or low ground. (See illustration page 4.)

2 ft.	Trans.....	\$ 25 each	\$1 00 per 10	\$8 00 per 100

" **var. spectabilis.** (20 to 25 ft.) Chinese Double Flowering Apple. This bears clusters of white flowers, pink in the bud, which are quite fragrant. One of the most desirable sorts.

12 to 18 in. Trans.....	\$ 25 each	\$2 00 per 10	
2 to 3 ft. ".....	35 "	3 00 "	\$25 00 per 100
4 to 5 ft. ".....	50 "	4 00 "	10 "

QUERCUS. Oak.

On account of a reputed slow growth, which reputation is undeserved, oaks were formerly not so extensively planted as they ought to have been; but now the demand exceeds the supply. In point of fact they are not at all slow growing; but keep pace with most other trees. Our own country is particularly rich in Oaks, and of these we are pleased to offer every species obtainable that will grow in Philadelphia. Many are of uncommon beauty, and for avenues, parks, public grounds and similar places, where they can be given room to develop, they will prove of great value. When transplanted they require severe pruning, which will cause them to quickly recover and soon make rapid growth again.

Quercus alba. White Oak. (50 to 60 ft.) One of the largest and fastest growing Oaks, forming a wide spreading head when fully developed. The foliage takes on a light purplish hue in late autumn. Suitable for avenue planting.

18 to 24 in. Seed.....	\$ 25 each	\$1 25 per 10	\$8 00 per 100
2 to 3 ft. Trans.....	50 "	3 50 " 10	25 00 " 100
4 to 5 ft. ".....	75 "	6 00 " 10	

aquatica. (18 to 20 ft.) A Southern species, making but a large shrub in the North. 18 to 24 in. Seed..... \$ 25 each \$1 25 per 10 \$8 00 per 100

Bannisteri. Scrub Oak. (8 to 10 ft.) This makes but a good sized shrub, bearing acorns when but three to four feet high. Besides as a curiosity it is excellent for planting to form thick covers and masses. It will thrive in the poorest and driest soils.

8 to 12 in. Seed.....	\$ 25 each	\$1 25 per 10	\$8 00 per 100
2 to 3 ft. Trans.....	50 "	4 00 " 10	

bicolor. Swamp White Oak. (40 to 50 ft.) A massive tree when fully grown. It bears quite large, dark green leaves and acorns of large size. This sort requires less pruning when transplanted than some of the others. We consider it one of the best sorts for ornamental planting. It thrives quite well in either wet or dry situations.

3 to 4 ft. Seed.....	\$ 25 each	\$1 75 per 10	\$12 50 per 100
4 to 5 ft. Trans.....	50 "	4 00 " 10	30 00 " 100
6 ft. ".....	75 "		
10 to 12 ft. " Specimens.....	2 50 to 5 00 each		

castanea. Chestnut Oak. (35 to 40 ft.) A medium sized tree, with chestnut-like leaves.

5 to 6 ft. ".....	\$ 75 each		
-------------------	------------	--	--

cerris. Turkey Oak. (30 to 35 ft.) This makes a medium sized tree, of thick, dense growth, and, as with other European sorts, it keeps its foliage green, without change, until destroyed by frost. The acorns are in a rather mossy cup. A remarkably pretty ornamental sort.

2 to 3 ft. Seed.....	\$ 25 each	\$1 50 per 10	\$10 00 per 100
3 to 4 ft. ".....	35 "	2 50 " 10	15 00 " 100
4 to 5 ft. ".....	50 "	4 00 " 10	
10 to 12 ft. Trans.....	1 75 to 3 00 each		

coccinea. Scarlet Oak. (50 to 60 ft.) This is perhaps the most esteemed of all Oaks. Not only does it make a large, well shaped tree, but in the fall the foliage changes to a brilliant scarlet. It makes a fine street or avenue tree; but should be severely pruned when transplanted. It has very large, leathery leaves of a rich green color.

12 to 18 in. Seed.....	\$ 25 each	\$1 00 per 10	\$8 00 per 100
2 to 3 ft. ".....	25 "	1 50 " 10	10 00 " 100

dentata. (Daimio.) (25 to 30 ft.) A native of Japan and a useful sort for ornamental planting.

3 ft. Trans.....	\$ 75 each		
------------------	------------	--	--

Quercus falcata. Spanish Oak. (50 to 60 ft.) This, though a native tree, is called Spanish Oak. It grows to a large size, and has much divided leaves, and bears acorns of quite small size

2 to 3 ft. Trans.....	\$ 50 each		
-----------------------	------------	--	--

imbricaria. Laurel Oak. (35 to 40 ft.) A beautiful, spreading tree, with long, entire leaves, resembling those of the Laurel and not like other Oaks. It is very well named. In the autumn the foliage changes to a rich yellow and carmine color. Either as a single specimen or in groups on a lawn it produces a marked effect. Prune closely when transplanted.

3 ft. Seed.....	\$ 35 each	\$2 50 per 10	\$15 00 per 100
3 to 4 ft. Trans.....	50 "	4 00 " 10	
8 to 10 ft. ".....	1 50 "		
10 ft. " Specimens, \$2 00 to \$5 00 each			

lyrata. Lyre-leaved Oak. (40 to 50 ft.) A rare sort, native of the South; but hardy in Philadelphia. The foliage, which is of small size, keeps green very late in autumn. Its acorns are entirely enclosed in a mossy cup. For ornamental planting.

2 to 3 ft. Trans.....	\$ 35 "	\$2 50 per 10	
8 to 10 ft. " Specimens, \$1 50 to \$2 00 each			

macrocarpa. Mossy Cup. Burr Oak. (35 to 40 ft.) One of the most beautiful of Oaks, of massive, open growth, and with large, heavy leaves. The acorns are of the largest size. An interesting feature is the mossy cup which holds the acorn, not to mention its extremely heavy, corky bark. It is easily transplanted if pruned severely.

3 to 4 ft. Seed.....	\$ 35 each	\$2 00 per 10	\$15 00 per 100
6 ft. ".....	75 "	6 00 " 10	
8 ft. ".....	1 25 "		

Michauxii. A rather rare species, of large size, approaching in character the discolor.

18 to 24 in. Seed.....	\$ 25 each	\$1 50 per 10	\$10 00 per 100
------------------------	------------	---------------	-----------------

nigra. Black Jack Oak. (30 to 35 ft.) A medium sized tree, with large, heavy, dark green leaves; but quite small acorns. Will grow in dry, rocky soils. Requires sharp pruning when moved.

2 to 3 ft. Seed.....	\$ 25 each	\$1 50 per 10	\$10 00 per 100
3 to 4 ft. ".....	35 "	2 50 " 10	15 00 " 100

obtusiloba. Post Oak. (30 to 35 ft.) This oak makes a round-headed, spreading tree, which is much admired. The acorns are very small.

2 to 3 ft. Seed.....	\$ 25 each	\$1 50 per 10	\$10 00 per 100
3 to 4 ft. ".....	35 "	2 50 " 10	15 00 " 100

olivæformis. (35 to 40 ft.) Approaching macrocarpa in character, but distinct. The acorns are large, and longer than wide.

2 to 3 ft. Seed.....	\$ 25 each	\$1 50 per 10	\$10 00 per 100
3 to 4 ft. Trans.....	50 "	4 00 " 10	
6 to 7 ft. ".....	75 "	6 50 " 10	
8 ft. ".....	1 00 "		

palustris. Pin Oak. (40 to 50 ft.) An oak distinguished from all others by its peculiar beauty. The leaves are deep green and finely divided. As the tree grows, the branches droop until the lower ones touch the ground. It is also easily transplanted. It is now much appreciated for its great beauty when well developed. The foliage takes on a partly scarlet and yellow color in the fall. As an avenue tree it is unequalled, and it will also thrive as a street tree in cities. A row in Fairmount Park, Philadelphia, is greatly admired.

12 to 18 in. Seed.....	\$ 25 each	\$1 00 per 10	\$8 00 per 100
3 to 4 ft. ".....	35 "	1 75 " 10	12 50 " 100

-----------------------	------------

SALISBURIA. Maiden Hair. Ginkgo.

Salisburia adiantifolia. (30 to 40 ft.) A Japanese tree of large size and columnar growth. When full grown it is more spreading. The leaves resemble those of the Maiden Hair Fern. A valuable, ornamental tree, and useful for street and avenue planting. If pruned several times when young it will make a round, compact headed tree. It seems to thrive well on sidewalks in the city.

18 to 24 in. Seed.....	\$ 25 each	\$1 50 per 10	\$10 00 per 100
2 to 2½ ft. "	35 "	2 00 " 10	15 00 " 100

7 to 8 ft. "	1 00 "	8 50 " 10	
10 ft. "	1 50 "		

SALIX. Willow.

Willows comprise a useful and large class of trees. Planters find them very useful. Some of them have highly colored wood in winter, such, for instance, as the Vitellina, yellow, and Britzensis, flame colored. The list of willows is such a large one, and many are so difficult to distinguish from others, that the names can hardly be guaranteed.

Salix acutifolia. A strong grower, and a good basket willow.

3 to 4 ft. Cuttings.....	\$ 25 each	\$1 50 per 10
--------------------------	------------	---------------

" **alba.** White Willow. (30 to 35 ft.) A European sort, with light colored leaves. It makes a good sized tree.

2 ft. Cuttings.....	\$ 25 each	\$1 00 per 10	\$6 00 per 100
4 to 5 ft. Trans.....	35 "	2 50 " 10	
8 to 10 ft. "	75 "		

" **annularis.** Curled or Ring Willow. (25 to 30 ft.) The leaves curl curiously, in ring shape. A unique sort, useful in ornamental grouping.

3 to 4 ft. Cuttings.....	25 each	\$1 50 per 10
5 ft. Trans.....	50 "	3 50 " 10

" **aurea pendula.** Golden Weeping Willow. (30 to 35 ft.) The bark of this sort is of a bright golden color. The branches are somewhat drooping. It makes a medium sized, ornamental tree.

3 to 4 ft. Cuttings.....	\$ 25 each	\$1 25 per 10	\$8 00 per 100
4 to 5 ft. "	35 "	1 50 " 10	10 00 " 100
6 ft. Trans.....	50 "	3 50 " 10	

" **Babylonica.** Weeping Willow. (35 to 40 ft.) Too well-known to need description. It need not be confined to damp places; and this holds good with all willows. Prune closely when transplanted.

2 ft. Cuttings.....	\$ 25 each	\$1 00 per 10	\$6 00 per 100
3 to 4 ft. "	35 "	1 25 " 10	8 00 " 100

8 to 10 ft. "	1 00 "		

" **var. Salamonii.** (35 to 40 ft.) This may be called the same as the above, without the drooping character.

3 to 4 ft. Cuttings.....	\$ 25 each	\$1 25 per 10
5 ft. Trans.....	50 "	3 50 " 10

Salix caprea. Goat Willow. (10 to 15 ft.) A large, bush-like sort, and quite ornamental when its catkins are expanded in early spring. Known better, perhaps, as the "Pussy Willow."

3 to 4 ft. Trans.....	\$ 35 each	\$2 00 per 10
-----------------------	------------	---------------

" **var. pendula.** Kilmarnock Weeping Willow. (5 to 6 ft.) Grafted on stems five to six feet high it forms an umbrella shaped head, which makes it of much use to planters. It is a well known weeping sort.

5 ft. Trans. Bushy heads.....	\$1 00 each	\$7 50 per 10
-------------------------------	-------------	---------------

" **cordata vestita.** A native species, valued in the West for its quick growth.

4 to 5 ft. Cuttings.....	\$ 35 each	\$1 25 per 10
--------------------------	------------	---------------

" **Forbyana.** (10 to 12 ft.) A strong growing, bush-like sort. Perhaps the best of all for basket purposes.

3 to 4 ft. Cuttings.....	\$ 25 each	\$1 25 per 10
4 to 5 ft. "	50 "	3 50 " 10

" **Japonica.** (20 to 25 ft.) This has broad, shining green leaves, making it quite ornamental.

3 to 4 ft. Cuttings.....	\$ 25 each	\$1 25 per 10
4 to 5 ft. "	50 "	3 50 " 10

" **pentandra.** Laurel leaved. (20 to 25 ft.) One of the best for foliage, which is of a bright shining green, remaining on the plant late in the fall. A fine sort for massing, and valuable for planting at the seashore.

2 ft. Cuttings.....	\$ 25 each	\$1 00 per 10	\$6 00 per 100
3 to 4 ft. "	35 "	1 25 " 10	10 00 " 100
5 ft. Trans.....	50 "	3 50 " 10	

" **purpurea pendula.** (5 to 7 ft.) A weeping form, with purple branches, which when grafted on tall stems is very useful for planting on the lawn.

3 to 4 ft. Cuttings.....	\$ 25 each	\$1 25 per 10
5 to 6 ft. Grafted on stems.....	1 25 "	

" **rosmarinifolia.** Rosemary Willow. (5 to 7 ft.) This has quite small, light green foliage and slender twigs. Grafted on tall stems, it makes large round heads. A desirable, ornamental, lawn tree.

18 to 24 in. Cuttings.....	\$ 25 each	\$1 00 per 10	\$6 00 per 100
2 to 3 ft. "	25 "	1 25 " 10	10 00 " 100

" **Sieboldiana.** A Japanese species, having shining green leaves.

3 to 4 ft. Cuttings.....	\$ 25 each	\$1 25 per 10
4 to 5 ft. "	35 "	2 00 " 10

" **Villarsiana.** This has yellow wood and whitish green leaves.

3 to 4 ft. Cuttings.....	\$ 25 each	\$1 25 per 10
--------------------------	------------	---------------

" **viminalis.** (30 to 35 ft.) A strong growing Willow.

2 to 3 ft. Cuttings.....	\$ 25 each	\$1 50 per 10
--------------------------	------------	---------------

" **vitellina.** Golden Willow. (15 to 20 ft.) This is valued very much for its bright golden-barked twigs in the winter season, for the effect of which it is much planted. It is especially showy when planted in large groups. To produce the best results it should be severely trimmed every winter in order to induce a quantity of strong, young growths.

18 to 24 in. Cuttings.....	\$ 25 each	\$1 00 per 10	\$6 00 per 100
3 to 4 ft. "	35 "	1 50 " 10	10 00 " 100

4 to 5 ft. Trans..... 50 " 4 00 " 10

" **violacea.** (25 to 30 ft.) Of the same character as the preceding one, but with violet colored flowers.

18 to 24 in. Seed..... \$ 25 each \$1 50 per 10
3 to 4 ft. Trans..... 50 " 3 50 " 10
5 ft. "..... 75 "

Staphylea. (See shrubs.)

Stuartia. (See shrubs.)

TAXODIUM, Deciduous or Bald Cypress.

Taxodium distichum. (40 to 50 ft.) The delicate, feathery foliage of this tree, its rapid pyramidal growth, and beauty when in full foliage, find for it a place in every collection. Though preferring a damp situation, it does not demand it, as many fine specimens are thriving in dry soil in high altitudes. Prune closely when transplanted.

2 to 3 ft. Seed..... \$ 25 each \$1 25 per 10 \$10 00 per 100
2 ft. Trans..... 25 " 1 75 " 10 15 00 " 100

PRICES: - Five shrubs of any one variety and of the same size furnished at the rate per 10. Fifty at the rate per 100. When 250 or more are required, a special price will be given by letter.

SHRUBS SELECTED by customers in the nurseries will be charged for accordingly. When customers do not specify the size or price of the shrub wanted, it must be taken for granted that the selection of a suitable size is left to our judgment.

THE TIME OF FLOWERING named is for the vicinity of Philadelphia.

ANDROMEDA.

The Andromedas are useful for planting in or along the edges of woods, in masses, or with other shrubs of similar character on the lawn.

Andromeda ligustrina. (3 to 4 ft.) A very pretty bush, bearing small bunches of white flowers, towards the middle of May.

12 to 18 in. Trans. \$ 35 each \$2 50 per 10 \$20 00 per 100

" **Mariana.** (1½ to 2 ft.) A beautiful species, bearing clusters of waxy white flowers along the length of the shoots. The flowers expand the first week in June.

10 to 12 in. Trans. \$ 25 each \$2 00 per 10 \$17 50 per 100
12 to 18 in. " 35 " 3 00 " 10

" **racemosa.** (2 to 3 ft.) This blooms early in June. The flowers are in long racemes, waxy white, sweet, appearing on the under side of the racemes.

18 to 24 in. Trans. \$ 35 each \$3 00 per 10 \$25 00 per 100

" **recurva.** (2 to 3 ft.) This also has white flowers, in racemes, in early June.

1 foot. Trans. \$ 35 each \$3 00 per 10

AZALEA.

Azalea aborescens. (4 ft.) A large growing "Wood Honeysuckle." Grows to a large sized bush. Its pinkish white flowers appear about June 15th. It can be grown successfully in the woods or in dry situations.

12 to 18 in. Trans. \$ 35 each \$3 00 per 10

" **Amœna.** An evergreen variety. Leaves small, almost round, dark green turning brown almost black in winter. It is a dwarf compact grower and about the second week of May is completely covered with claret colored flowers. Besides making a conspicuous specimen plant, it is also used largely for planting around the edges of Azalea or Rhododendron beds.

1 ft. Bushy clumps. \$ 50 each \$4 50 per 10 \$40 00 per 100

Amygdalus nana,
Flowering Almond.

AZALEA MOLLIS, Red and Yellow.

This is a species from China, and is, perhaps, one of the most attractive flowering shrubs introduced from that country. It is of comparative dwarf, bush-like habit, with light green leaves, which are somewhat larger than those of other azaleas.

The flowers are as large as the Indian Azaleas, usually seen in greenhouses, being two and a half to three inches in diameter, and appear in bunches on the ends of the shoots. There are but two colors of it, yellow and red, and they expand about the middle of May.

We know of no other flowering shrub to equal them in attractiveness; and when massed in a large bed they create a particularly beautiful spot on the lawn.

They are also very effective when planted around the edges of Rhododendron beds, as the dark green leaves of the Rhododendrons make a strong background for the bright colors of the Azaleas. They are also valuable for mixing in beds with the Azalea Pontica (Ghent Azaleas) as they bloom before the latter expand.

We feel particularly fortunate in having secured an extra fine lot of these plants at a low figure, and can offer them to our customers, for this Spring only, at extremely low prices for quantities, until this special lot is all disposed of.

Azalea calendulacea. (3 to 4 ft.) The lovely flame colored one of the Southern Alleghenies. Blooms about May 25th.

12 to 18 in. Trans..... \$ 35 each \$3 00 per 10 \$20 00 per 100

" **Mollis.** (Chinese Azalea.) Red or yellow. (2 to 3 ft.)

18 to 24 in. Trans..... \$ 75 each \$5 00 per 10 \$40 00 per 100

" **Pontica.** (3 to 4 ft.) The well known "Ghent Azalea." Existing in many colors, hardy and beautiful when in bloom, it is a favorite with planters. It flowers the latter part of May. They are largely used for planting in beds with Rhododendrons or with Azalea Mollis,—in this way they make a particularly beautiful showing.

2 ft. Bushy..... \$ 1 00 each \$7 50 per 10 \$60 00 per 100

3 ft. "..... 1 50 "

" **nudiflora.** (3 to 4 ft.) Wood Honeysuckle. The beautiful wild one of our woods. The light pink flowers appear about the 15th of May. An elegant shrub for planting in masses or with other shrubs or in beds.

8 to 12 in. Trans..... \$ 35 each \$2 50 per 10 \$17 50 per 100

" **Vaseyi.** (Rhododendron.) (1 to 2 ft.) This has pink flowers, which expand about the middle of May.

1 foot..... \$ 35 each

" **viscosa.** (3 to 4 ft.) This beautiful species does not produce its sweet scented white flowers until the middle of June, and they do not all come at once. On this account it is largely planted with the other sorts to prolong the flowering season.

12 to 15 in. Trans..... \$ 35 each \$2 50 per 10 \$17 50 per 100

BACCHARIS.

Baccharis halimifolia. (3 to 4 ft.) A spreading shrub, native to sandy districts near the sea coast, but thriving well in all situations. In late fall, the white pappus of the fertile plants is quite ornamental. In this condition it very much resembles a cotton plant. Useful for massing.

3 to 4 ft. Trans..... \$ 50 each \$4 00 per 10

BERBERIS THUNBERGII.

(Japanese Berberry.)

This is a dwarf, spreading Japanese species, with small, neat foliage and compact, rounded growth. The white flowers appear about the 25th of May, followed by berries, in great abundance, which towards the close of summer are of a deep scarlet color, and they continue of this color all winter long. The foliage, too, is most brilliant in its autumnal coloring. It is much used for ornamental hedging, and for planting in masses.

Berberis Thunbergii, Japanese Berberry.

Berberis vulgaris. (4 to 5 ft.) Common Berberry. The pretty yellow flowers of this bush are produced about the 20th of May. It is of erect growth; and its prickly nature fits it for hedging. The berries completely cover the plant, and are of a purplish red color. They remain on the plant nearly all winter.

12 to 18 in. Seed.....	\$ 25 each	\$ 75 per 10	\$ 5 00 per 100

CARYOPTERIS

MASTACANTHUS.

This shrub was introduced to American buyers last year, though we have had it in our nurseries for five years past, where we have been thoroughly testing it.

Our experience with it leads us to offer it as one of the best of fall flowering shrubs. The first flowers commence to open about the middle of September; others follow, keeping up the display until the middle of October. They are of a light blue color, and have somewhat the appearance of a Verbena. It has been called by some growers the "Blue Spiraea," but this is incorrect, as it does not belong to that family. It is a dwarf grower, rarely exceeding three feet in height, and is admirably suited for planting on the outer edges of shrubbery beds, or in a group.

In some parts of the country the tops would possibly kill back, but as the flowers are on the growth made the same year of flowering, it does not injure the shrub to lose a portion of its top.

CASSIA. Senna Bush.

Cassia Marylandica. (4 to 5 ft.) Though the branches are not perennial its annual growth is so shrub-like that it is often listed with shrubs. Its yellow flowers appear in late June. Largely used for massing.

12 to 18 in. Seed \$ 25 each \$ 1 00 per 10 \$ 7 00 per 100

Cercis Japonica, Japanese Judas.

CARPINUS. Hornbeam.

Carpinus Americana. (15 to 20 ft.) A large shrub, often planted for screening or hedging purposes, as it grows thickly and retains its withered leaves all winter, to some extent. When grown to one stem, it makes a small sized, spreading tree. It is found in low, damp ground, but thrives equally as well in high, stony soil.

" **var. Maritima.** (8 to 10 ft.) With narrow, shining foliage.
3 ft..... \$ 50 each

CHIONANTHUS VIRGINICA.

(White Fringe.)

Though not by any means a new plant, it is still one of the best where a large sized shrub is required. It makes a bush about eight to ten feet in height, and when in full bloom, about the end of May, it is very attractive. The flowers are white, and fringe-like, and completely cover the bush.

Later in the summer the large grape-like berries turn dark purple, and this is an additional attraction.

CLERODENDRON.

Clerodendron foetidum (Bungei). This bears large heads of rose colored, sweet scented flowers. Though the tops get killed in winter here, it grows freely again from the root, and flowers in August.

2 to 3 ft. Trans..... \$ 50 each \$4 00 per 10

" **infortunatum (viscosum).** This shrub-like species bears heads of white flowers in the early days of September.

CYDONIA JAPONICA.

(See Pyrus Japonica.)

DAPHNE.

Daphne cneorum. (1 foot.) An evergreen, spreading sort, used largely for edging Rhododendron and Azalea beds. The flowers are pink, and very fragrant. They commence to expand in the first week of May, and continue to flower for several weeks. It is not uncommon for occasional flowers to appear throughout the summer.

6 to 8 in. broad..... \$ 50 each \$4 00 per 10

Mezereum album. (2 feet.) This beautiful and sweet scented flowered shrub blossoms among the very first of those of spring. The white flowers appear on the naked stems in the first warm days of April.

DEUTZIA.

All the varieties of Deutzias, with the single exception of the *gracilis*, make a vigorous, upright growth, with a somewhat compact habit, of about six or eight feet in height. The flowers are in sprays, in some sorts of pure white color, in others, pink. One sort, the *Pride of Rochester*, has white flowers tinged with pink. They are useful shrubs either as single specimens or for planting at the back of shrubbery beds.

They bloom about the 10th of June. Although all these Deutzias bloom about the same time, we find some are a few days in advance of others. We have found them to expand in the following order:—*Pride of Rochester*, *Scabra*, *Crenata*, *Double White*, *Crenata*, *Double Pink*. (See illustration page 6.)

**DIERVILLA.**

Diervilla sessilifolia. (3 to 4 ft.) A native shrub, of somewhat spreading growth, bearing terminal, loose heads of yellow flowers about the first week in July, which continue for some weeks.

12 to 18 in. Cuttings..... \$ 25 each \$1 75 per 10 \$12 50 per 100
3 ft. "..... 35 " 2 50 " 10
3 to 4 ft. Bushy..... 50 " 4 00 " 10

Diervilla trifida. (2 to 3 ft.) Of much the same habit, and flowering at the same time, but of smaller growth.

12 in. Cuttings.....	\$ 25 each	\$1 75 per 10
2 ft. Trans.....	35 "	2 50 " 10

DIRCA. Leatherwood.

Dirca palustris. (5 to 6 ft.) A pretty, native shrub, with leather-like shoots. It flowers very early, the little yellow blossoms, which are in pairs at the axils of the leaves, appearing about the middle of May.

2 to 2½ ft. Bushy.....	\$ 50 each	\$3 50 per 10
------------------------	------------	---------------

ELÆAGNUS. Silver Thorn.

Elæagnus hortensis. (6 to 7 ft.) One of the silver thorns; noted for its silvery, downy leaf.

4 to 5 ft. Bushy.....	\$ 50 each
-----------------------	------------

" **longipes.** (5 to 6 ft.) This has small, yellowish white flowers, in May, followed by berries somewhat larger than currants, which when ripe, towards the close of June, are very good for eating fresh or for cooking, besides that the bush is then quite ornamental.

1 foot. Trans.....	\$ 50 each
--------------------	------------

" **parvifolia.** (6 to 7 ft.) This one is generally understood when "Silver Thorn" is spoken of, though the name applies to all the species. It has sweet scented yellow flowers, in great profusion, in May. The stems are clustered with mottled red berries in July, which, while not equal to those of longipes, are fairly good eating.

18 to 24 in. Seed.....	\$ 35 each	\$2 50 per 10
3 to 4 ft. Trans.....	50 "	4 00 " 10

" **umbellata.** (6 to 7 ft.) Although flowering at the same time that the others do, this one does not ripen its fruit until late October. It is of the same color as the preceding one. So ornamental are the bushes at that time that they are planted especially because of this feature. Only female plants bear fruit.

12 to 18 in. Cuttings.....	\$ 25 each	\$1 50 per 10
3 ft. Bushy.....	35 "	

GAYLUSSACIA. Huckleberry. Blueberry.

Gaylussacia frondosa (3 to 5 ft.) Blueberry. Bears sweet, bluish berries.

All kinds of Huckleberries may be planted in the woods if desired, or in any poor soil, although, of course, the fruit is better when they are planted in good ground.

12 to 18 in. Trans.....	\$ 35 each	\$2 50 per 10	\$20 00 per 100
-------------------------	------------	---------------	-----------------

" **resinosa.** (2 to 2½ ft.) A low, bushy shrub, growing about two feet high, and producing sweet, black fruit, which ripens in August.

8 to 10 ft. Trans.....	\$ 35 each	\$2 50 per 10
------------------------	------------	---------------

GENISTA. Scotch Broom.

Genista scoparia. (5 to 6 ft.) To the casual observer, this shrub appears to have no leaves, as, being so few and small, they are not particularly noticeable. The stems and branches are of a bright green color, standing in strong contrast to other plants. The flowers are yellow, pea-shaped, and completely cover the plant, opening during the last days of May. North of Philadelphia, it requires some protection, and even here it is sometimes partially winter-killed, though rarely enough to prevent its blooming the succeeding summer. It is useful for planting in masses, in sheltered positions. In Europe it is used as game-covers. Requires severe pruning when transplanted.

2 to 3 ft. Seed.....	\$ 35 each	\$2 50 per 10	\$15 00 per 100
----------------------	------------	---------------	-----------------

Cenista scoparia Andreana. (5 to 6 ft.) A variety of the above, having the lower petals of the flower bronze, instead of yellow. It is a beautiful shrub for planting with other kinds, or for forcing in the greenhouse.
18 to 24 in. in pots..... \$ 75 each \$ 60 per 10

HALIMODENDRON.

Halimodendron argenteum.

2 to 3 ft. Trans..... \$ 75 each

HALESIA. Snowdrop. Silver Bell.

Halesia diptera. (7 to 8 ft.) A Southern species, quite hardy in Philadelphia. It has white flowers, and blooms early in June.

18 to 24 in. Seed..... \$ 25 each \$ 20 per 10
3 to 4 ft. "..... 65 " 5 00 " 10

" **tetraptera.** (8 to 10 ft.) This is most beautiful when covered with its "silver bell" flowers in mid-May. The resemblance to snowdrop flowers suggests its common name. Although commonly seen as large shrubs, all Halesias can be grown as trees, in time attaining quite large size.

18 to 24 in. Seed..... \$ 25 each \$ 1 50 per 10 \$ 10 00 per 100
2 to 3 ft. "..... 35 " 2 50 " 10 15 00 " 100

Halesia tetraptera, Silver Bell.

HYDRANGEA PANICULATA GRANDIFLORA.

(Japanese Hydrangea.)

This shrub is now so well-known that it requires no description. Every-where it is seen, either as a single specimen or in large beds.

While as a single specimen it makes the most conspicuous flowering shrub in late summer and fall, yet when planted together in quantities in a large bed it has an effect that no other shrub in masses produces,—one great mass of snow white flowers. Each head being so large, it makes the effect more striking than would otherwise be the case.

Hydrangea paniculata grandiflora, Japanese Hydrangea.

It is planted in great numbers at Newport, and attracts a great deal of admiration at that well-known place. It should be pruned to the ground every winter as it is desirable to prevent the plant from growing too tall,—and it will bloom as profusely and in fact make larger heads of bloom than if left unpruned. A bed of one hundred makes a most striking appearance.

We particularly call your attention to the low price we are offering this shrub,—we grow it in immense quantities, consequently we are able to offer only the very best stock.

Hydrangea paniculata grandiflora. (5 to 6 ft.) This now well-known shrub bears immense heads of white flowers in early August. There are so few shrubs in bloom then, that this makes it of value, besides its own worth. It is much used for massing.

vulgare. (5 to 6 ft.) European Privet. Formerly much used for hedges and still useful for the same purpose, as, in fact, are all privets. When grown as a single specimen it produces panicles of white flowers in June. The foliage is of a lighter green than the other sorts. The black berries remain on the bush all winter, and are quite ornamental.

12 to 18 in. Trans..	\$ 25 each	\$1 00 per 10	\$7 00 per 100
2 to 3 ft. Cuttings	35 "	1 50 " 10	10 00 " 100

LIMONIA. (CITRUS.) Hardy Orange.

Limonia trifoliata (Triphasia aurantiola). (6 to 8 ft.)

This bears sweet scented white flowers the first thing in spring, and in the fall it has small "oranges" of a dull red color, but the fruit is too bitter to be eaten. It is being used as a hedge plant, for which purpose it is likely to prove very valuable where hardy, as is the case here. The branches are stiff and the spines very stout. It makes a much better plant for protective hedges than the Osage Orange, and is far more ornamental.

12 to 15 in. Seed.....	\$ 25 each	\$ 75 per 10	\$5 00 per 100
18 in. ".....	25 "	1 00 " 10	6 00 " 100

PYRUS ARBUTIFOLIA.

(Choke Berry.)

This is a Native Shrub, and it is very ornamental, both in spring and fall.

It makes a fair sized shrub, of rather open growth, with pretty dark green leaves.

The flowers are white, of rather small size, but are borne in bunches all along the stems of the one year old wood. They appear in such abundance as to entirely envelop the bush,—about the second week in May. The flowers are followed by bright red berries, as shown in the illustration, which remain on the plant almost all winter. This is one of the features that make this plant so desirable. Then, too, it will thrive in comparatively poor soil,—in the woods or in somewhat low ground. When planted in masses it makes a gorgeous effect in fall and winter when covered with these bright red berries.

Pyrus arbutifolia.

RHODOTYPUS.

Rhodotypus Kerrioides. (4 to 5 ft.) A pretty, new shrub, bearing white flowers on the ends of its twigs. It commences to bloom about May 15th, and continues for a long while.

18 to 24 in. Seed.....	\$ 25 each	\$1 75 per 10	\$13 00 per 100
3 ft. Trans.....	35 "	2 50 "	10 "

Rosa rugosa. Russian Rose. (3 to 4 ft.) The large, handsome foliage of this rose, and its large, single pink flowers, have made it exceedingly popular. Besides this it bears fine, large red fruit in late summer, which, by some, is esteemed as much as the flowers.
2 ft. Trans..... \$ 35 each \$2 50 per 10 \$15 00 per 100

“ **var. alba.** (3 to 4 ft.) Of the same character as the above, but with white flowers.
2 ft. Trans..... \$ 35 each \$2 50 per 10 \$15 00 per 100

“ **var. Md. Geo. Brunt.** This is a hybrid between rugosa and Sombreul, introduced by us several years ago, and proving to be one of the best of this class. The flowers are white, semi-double, and are borne in clusters on the young wood.
2 ft. Trans..... \$ 35 each \$2 50 per 10

ROSA RUGOSA.

(Japanese Rose.)

There are two sorts of this beautiful rose, a red and a white flowered one. Because of their large single flowers, hardiness, vigorous growth and dark green foliage, they are more largely planted than any other kind to-day. Indeed, the vigorous, beautiful foliage is thought to be merit enough by many persons. The flowers are shell-like in formation, and are followed by haws or berries which, when ripe, are of a deep red color, and in size are as large or larger than an ox-heart cherry. These berries are conspicuous until quite late in autumn.

The flowers, however, are the chief feature, as may be inferred from the illustration. They are often four to five inches in diameter.

They are largely planted as single specimens, but when planted as they are at Newport, R. I., in masses ten, fifty or one hundred together, the effect is magnificent.

We are fortunate in possessing an extra fine lot of these plants, in the two colors, and it will be noticed how low the price is; lower, we think, than this class of stock has ever been offered before.

Prices as follows only until the stock is disposed of: 2 ft. trans., 35 cents each; \$2.50 per 10; \$15.00 per 100. One plant by mail for 50 cents, one of each color for 75 cents.

The number required may be of one sort only or made up from both,

Rosa setigera. Wild Prairie Rose (Running.) This good, hardy climbing rose bears large-sized yellowish white flowers in the last days of June.

12 to 18 in. Trans..... \$ 35 each \$2 50 per 10

“ **Wichuriana.** (Creeping.) This is a very desirable creeping variety. The leaves are small, dark green and shiny. The flowers are white, single, and the yellow stamens are quite prominent, giving the impression of a yellow centre. It is largely used for planting to cover banks, rocks and similar spots. It has been largely used in the Eastern States,—particularly in the parks of Boston.

2 to 2½ ft..... \$ 35 each \$2 50 per 10 \$15 00 per 100

SPIRÆA ANTHONY WATERER.

This beautiful variety of the well known Spiræa Bumalda called forth our admiration on seeing it at the home of the originator, in Europe, last season. In habit of growth it is the same as its parent, growing about 2 to 3 feet in height, and making a shapely bush. The heads of flowers are almost as broad again as the older kind, and are of a *deep pink color*.

It blooms about the close of June, and if the flowers are cut off as fast as they commence to decay, there will be a continuance of bloom throughout the season, to some extent.

It is useful for edging shrubbery beds, planting in masses, or as a single specimen where a low, bushy, flowering shrub is required.

One plant, by mail, 35 cents.

Spiræa Anthony Waterer.

RUBUS. Flowering Bramble.

Rubus deliciosus (3 to 4 ft.) A Rocky Mountain shrub, which bears pretty, light pink flowers in early June.

2 ft. Trans..... \$ 35 each

" **fruticosus**. Double Flowering Bramble. (Creeping.) This bears double white flowers towards the close of June.

3 to 4 ft.	"	35 "	2 50 "	15 00 "

" **var. Senator Volland.** (6 to 7 ft.) Rosy red.

18 to 24 in.	Trans.	\$ 25 each	\$ 1 50 per 10
2 to 3 ft.	"	35 "	2 50 "

" **villosa.** (5 to 6 ft.) A Japanese species, with large branching panicles, flowers light purple in bud, white when open. Blooms late in May.

12 to 18 in.	Trans.	\$ 25 each	\$ 1 50 per 10
2 to 3 ft.	"	35 "	2 50 "

TAMARIX. Tamarisk.

Tamarix Africana (tetrandra.) (7 to 8 ft.) The leaves of all the Tamarix are very small. This sort has light pink flowers, which appear towards the close of May. The Tamarisk thrives well at the sea shore.

18 to 24 in.	Cuttings	\$ 25 each	\$ 1 25 per 10	\$ 10 00 per 100
2 to 3 ft.	Trans.	35 "	2 50 "	15 00 "
4 to 5 ft.	"	50 "	4 00 "	10 "

" **Callica.** (7 to 8 ft.) Resembles the preceding a great deal, and blooms about the same time.

2 to 3 ft.	Cuttings	\$ 25 each	\$ 1 50 per 10	\$ 12 00 per 100
2 to 3 ft.	Trans.	35 "	2 50 "	15 00 "

" **Indica.** (7 to 8 ft.) All the species are alike in foliage to a great extent, but this one blooms in August; the flowers are pale rose.

2 to 3 ft.	Cuttings	\$ 25 each	\$ 1 50 per 10
2 to 3 ft.	Trans.	35 "	2 50 "

" **Japonica plumosa.** (7 to 8 ft.) There is some little variation in the foliage and habit of growth of this one, and, like the preceding one, it blooms in August.

18 to 24 in.	Cuttings	\$ 25 each	\$ 1 50 per 10
2 to 3 ft.	Trans.	35 "	

VACCINIUM. Huckleberry.

Vaccinium corymbosum. Blueberry. (3 to 4 ft.)

This has bunches of white flowers in May, followed by edible fruit in August. It grows to a large sized shrub, and in the autumn its foliage changes to a deep scarlet.

12 to 18 in.	Trans.	\$ 35 each	\$ 2 50 per 10	\$ 15 00 per 100
--------------	--------	------------	----------------	------------------

" **Pennsylvanicum.** (2 to 3 ft.) A low-growing huckleberry, making but a small bush. Its berries are sold in market in large quantities in the fall.

6 to 8 in.	Trans.	\$ 25 each	\$ 1 75 per 10	\$ 12 50 per 100
------------	--------	------------	----------------	------------------

" **vacillans.** (2 to 3 ft.) Not differing much from the preceding species.

8 to 10 in.	Trans.	\$ 25 each	\$ 1 75 per 10	\$ 12 50 per 100
-------------	--------	------------	----------------	------------------

Spiraea prunifolia,
Bridal Wreath.—See page 45.

VIBURNUM.

Viburnum acerifolium. Maple-Leaved. (4 ft.) A low-growing shrub, bearing flat heads of white flowers, in late May, followed by clusters of black berries in fall. A good variety for growing in masses, in the woods or in shaded places.

8 to 10 in. Trans.	\$ 25 each	\$1 50 per 10	\$10 00 per 100
2 ft. " "	35 "	2 50 "	10 "

cassinoides. (4 to 5 ft.) The green leaves and the flat heads of white flowers constitute pleasing features in this shrub. It blooms in June and bears black-colored berries in the fall

8 to 12 in. Trans.	\$ 25 each	\$2 00 per 10	\$15 00 per 100
3 ft. " "	35 "		

dentatum. (4 ft.) A bushy sort, very pretty when its white flowers expand in early June. The berries which follow change to a black color when ripe

12 to 18 in. Trans.	\$ 25 each	\$1 75 per 10	\$12 50 per 100
18 to 24 in. " "	25 "	2 00 "	10 "
2 to 2½ ft. " "	35 "	3 00 "	10 "
3 to 4 ft. " "	50 "	4 00 "	10 "

Vitex Agnus-castus.

Lantana. A large-growing, desirable shrub, producing corymbs of white flowers early in May, followed by berries which become pink, red and black in turn as they ripen. Useful either as a single plant or in groups.

12 to 18 in. Seed.	\$ 25 each	\$2 00 per 10	\$15 00 per 100
4 ft. " "	35 "	2 50 "	10 "
5 ft. Trans.	50 "	4 00 "	10 "

macrocephalum. (4 to 5 ft.) This blooms about the 20th of May. The flowers are in flat heads; the outside flowers are of good size, the inner ones much smaller.

3 ft. Trans.	\$ 50 each		
--------------	------------	--	--

nepalense. (5 to 6 ft.) A strong grower, foliage large, and the bush of compact form. Flowers are white and come in early June.

12 to 18 in. Trans.	\$ 25 each	\$2 00 per 10	\$15 00 per 100
2 to 3 ft. " "	35 "	2 50 "	10 "

Viburnum Opulus. Common Snowball. (6 to 7 ft.) This well-known shrub finds great favor with planters. The large balls come singly, hanging by stems along the branches, expanding towards the close of May, a little in advance of the Japanese.

12 to 18 in. Trans.	\$ 25 each	\$1 25 per 10	\$8 00 per 100
2 ft. " "	25 "	1 50 "	10 00 "
3 to 4 ft. Bushy	35 "	2 50 "	10 15 00 "
4 to 5 ft. " "	50 "	4 00 "	10 "

var. nana. (1 to 2½ ft.) This is a veritable dwarf variety, growing very bushy, but with little disposition to flower.

1 foot. Clump	\$ 35 each	\$2 50 per 10	\$15 00 per 100
---------------	------------	---------------	-----------------

Oxycoccus. High-bush Cranberry. (4 to 5 ft.) Flowers in large, flat heads in the latter part of May. The outer flowers are of good size the inner ones quite small. In the fall it is full of bright red berries.

8 to 12 in. Trans.	\$ 25 each	\$1 00 per 10	\$8 00 per 100
18 to 24 in. " "	25 "	1 50 "	10 10 00 "
2 to 3 ft. " "	35 "	2 50 "	10 "

phlebotrychium. Bears flat heads of white flowers, which expand in early June.

2 ft. Trans.	\$ 35 each	\$2 50 per 10	
--------------	------------	---------------	--

plicatum. (6 to 7 ft.) Japanese Snowball. (See Colored Plate.) One of the best of shrubs. Of upright bushy growth, entire leaves, and bearing heads of white flowers in great profusion, it stands unrivalled among shrubs. Much superior to the old snowball. It blooms towards the close of May. One plant by mail for 35 cents.

12 to 18 in. Trans.	\$ 25 each	\$1 50 per 10	\$10 00 per 100
2 to 2½ ft. Bushy	35 "	2 50 "	10 17 50 "
3 ft. " "	50 "	4 00 "	10 30 00 "
3 to 4 ft. " "	75 "	6 00 "	10 50 00 "
5 to 6 ft. " "	1 00 "	8 50 "	10 70 00 "
4 to 5 ft. Tree form	50 "	4 00 "	10 30 00 "

var. rotundifolium. (6 to 7 ft.) This is a round leaved variety of the last named. It blooms a week in advance of the other. The individual flowers which make up the ball are rather larger than the type, and the leaves turn to a beautiful bronze and purple color in fall.

12 to 18 in. Trans.	\$ 25 each	\$2 00 per 10	
2 to 2½ ft. " "	35 "	3 00 "	10 "
4 to 5 ft. Bushy	50 "	4 00 "	10 "

prunifolium. Sheepberry. (5 to 6 ft.) A large growing shrub, bearing flat clusters of white flowers about the 15th of May, followed by black fruit in the fall.

2 to 3 ft. Trans.	\$ 35 each		
-------------------	------------	--	--

Sieboldi (reticulatum.) (7 to 8 ft.) This bears clusters of white flowers about May 20th. The leaves are very large, heavy, and dark green. It may be an evergreen in the South. It makes almost a small tree. A most desirable plant, especially when grown singly as a specimen.

12 to 18 in. Trans.	\$ 25 each	\$2 00 per 10	
2 to 3 ft. " "	35 "	3 00 "	10 \$25 00 per 100

2 to 3 ft. Trans.....	35 "	2 50 " 10	\$15 00 per 100
4 to 5 ft. Bushy.....	50 "	4 00 " 10	

WEIGELA FLORIBUNDA.

(Crimson Weigela.)

This is a variety introduced by us a few years ago, and it is still the only good one of this color.

It is a strong grower, blooming freely about the end of May, and frequently again in the fall, though not as profusely as in the spring.

The flowers are claret colored, the stamens which project from the flower are white, making a conspicuous contrast.

Weigela Groenewegenii. (5 to 6 ft.) One of the vigorous, tall growers. The flowers are dark rose.

12 to 18 in. Cuttings.....	\$ 25 each	\$1 50 per 10	\$10 00 per 100
2 to 3 ft. Trans.....	35 "	2 50 " 10

EVERGREENS.

"SEED" indicates that the stock is in the original seed-beds.

"BUSHY" indicates extra heavy stock.

FIGURES IN BRACKETS indicate about the height of the plant at maturity.

PRICES:—Five evergreens of any one variety and of the same size furnished at the rate per 10. Fifty at the rate per 100. When 250 or more are required, a special price will be given by letter.

ABIES. (PICEA.) Spruce.

Botanical authorities generally agree that what have been called Abies should be Picea, and vice versa, but we continue the names under which our customers have known the trees.

Abies alba. White Spruce. (25 to 30 ft.) A native tree of medium size, forming naturally a close, pyramidal growth, and having blue-gray tinted foliage, which is much admired.

8 to 12 in.	\$ 25 each	\$1 50 per 10
3 ft. Bushy	1 00 "	"
5 ft. "	1 50 "	"

" **Alcockiana. (Ajanensis.)** (25 to 30 ft.) A beautiful tree, the underside of the foliage being of a silvery blue color. We consider it one of the choicest of ornamental evergreens. A beautiful tree for a specimen on the lawn.

12 to 15 in. Bushy	\$ 75 each	\$6 00 per 10
2 ft. "	1 50 "	13 50 " 10
2½ ft. "	2 50 "	"

" **Canadensis.** Hemlock Spruce. (35 to 40 ft.) A lovely native tree, of loose, open growth, unless it is pruned, when it makes a very dense bush. Whether as a single specimen or as a hedge plant, it has no equal.

8 to 12 in.	\$ 25 each	\$1 25 per 10	\$10 00 per 100
12 to 15 in.	25 "	1 75 "	10 15 00 " 100
18 to 24 in.	35 "	2 50 "	10 20 00 " 100
2 to 2½ ft. Bushy	50 "	4 00 "	10 35 00 " 100
3 ft. "	1 00 "	9 00 "	10
5 ft. "	1 50 "	14 00 "	10

" **Douglasii.** Douglas Spruce. (35 to 40 ft.) A beautiful, rapid growing tree, with nice dark green foliage. It is a splendid tree for lawn planting, and is used in all work where a particularly choice tree is required.

1 foot	\$ 35 each	\$2 50 per 10	\$15 00 per 100
2½ ft.	1 50 "	"	"

" **Engelmanni.** (20 to 25 ft.) A Colorado evergreen of much beauty, its foliage on the under side being of a light blue color. It is of slow growth and dense habit. It is quite a rare sort.

1½ ft.	\$1 50 each	"	"
2 ft. Bushy	2 00 "	"	"

It should be remembered that the height does not indicate the value of the tree. If, as frequently is the case, a tree is very dense and spreading its value is greater than a slim tree of the same height. Customers may depend upon us to select plants of full value for the price charged.

Evergreens selected by customers in the nurseries, will be charged for accordingly. When customers do not specify the size or price of the evergreen wanted, it must be taken for granted that the selection of a suitable size is left to our judgment.

Abies excelsa. Norway Spruce. (40 to 50 ft.) A well-known evergreen, extensively used.

It is of a rapid growth. It is much used for hedging as well as for single specimens, and for planting for shelter. As a hedge plant it is probably unequalled by any other evergreen being hardy and making a dense, impenetrable hedge.

12 to 18 in.	\$ 25 each	\$1 50 per 10	\$10 00 per 100
18 to 24 in. Seed	25 "	1 00 "	10 6 00 " 100
18 to 24 in.	35 "	2 50 "	10 15 00 " 100

1 foot	\$ 50 each	"	"
2 ft. Bushy	1 50 "	"	"
3 ft. "	2 50 "	"	"

" **var. pygmaea.** (2 to 3 ft.) Dwarf, compact, making but a few feet of growth.

1½ ft. Bushy	\$1 00 each	"	"
2½ ft.	2 75 "	"	"

" **var. pyramidalis.** (25 to 30 ft.) A tall, slim, yet compact grower, of much use in plantings. (See cut page 54.)

2 ft.	\$ 75 each	"	"
4 ft. Bushy	2 50 "	"	"
5 ft.	3 00 "	"	"

Abies nigra Doumetti. (2 to 3 ft.) Of dwarf, dense and spreading growth; almost flat. It has small needles of bluish gray color. It is excellent for use when low growing specimen trees are wanted.

2 ft. Broad..... \$ 2 50 each
3 ft. "..... 3 50 "

Andromeda floribunda.

ANDROMEDA FLORIBUNDA.

This is one of the most beautiful dwarf broad leaved evergreens, and one that has been largely planted during the past few years. It blooms with the first plants in spring,—the white flowers making a beautiful contrast with the dark green foliage.

It is valuable for planting on the outer edges of Rhododendron and Galea beds, or along the borders of the woods or large masses of shrubbery.

Abies Orientalis. Oriental Spruce. (30 to 35 ft.) A most desirable sort. It has some resemblance to an exceedingly fine leaved Norway Spruce, but better. The tree is erect growing, of fine outline and with foliage of the darkest green. A species that is always used when making a selection for lawn planting.

1 foot. Bushy..... \$ 50 each 33 50 per 100
2 ft. "..... 1 50 "
3 ft. "..... 2 50 "

Abies polita. (25 to 30 ft.) A beautiful Japanese Spruce, the young wood of which is of a yellowish tint. It is a rare and choice sort, and should be included when extra fine varieties are needed.

1½ ft. Bushy..... \$ 75 each
2 ft. "..... 1 50 "
3 ft. "..... 2 50 "

" pungen. (25 to 30 ft.) Colorado Blue Spruce. One of the handsomest of spruces. The foliage is silvery blue, and the tree takes on a dense, shapely habit without any pruning. It is in great demand for lawn planting.

12 to 18 in. Bushy..... \$1 00 each \$9 00 per 100

ANDROMEDA.

(For deciduous Andromedas see page 29.)

Andromeda calyculata. (2 to 3 ft.) This has small leaves, and bears small white flowers on the under side of the twigs in the first days of May.

12 in. \$ 25 each \$2 00 per 100

" Catesbæi. (3 to 4 ft.) This has thick, shining green leaves, which change to a copper color in autumn. The drooping racemes of waxy white flowers appear towards the close of May

12 to 15 in. \$ 35 each \$2 50 per 100

" floribunda. (3 to 4 ft.) The upright panicles of white flowers appear towards the close of April. It is used extensively to plant with Rhododendrons and Azaleas.

12 to 18 in. Bushy..... \$ 75 each \$6 00 per 100 \$50 00 per 100

" Japonica. (3 to 4 ft.) A beautiful species, having bright green leaves and drooping racemes of waxy white flowers. The blossoms expand early in May. Similar in general character to the *Andromeda floribunda*.

12 to 18 in. Bushy..... \$ 75 each \$6 00 per 100 \$50 00 per 100

BIOTA. Chinese Arbor-Vitæ.

(For American Arbor-Vitæs and varieties see Thuja, page 57.)

Biota Orientalis. (15 to 20 ft.) This is the ordinary form. The very flat growth of the younger branches and its bright green foliage well distinguish it.

12 to 18 in. \$ 25 each \$1 00 per 100
2 to 3 ft. 35 " 2 50 " 10

" var. aurea Golden Chinese. (2 to 3 ft.) This has a golden tint with the green; and it makes but a dwarf, rounded growth. Useful for planting in evergreen beds.

12 to 15 in. \$ 25 each \$1 75 per 100 \$15 00 per 100
18 to 24 in. 35 " 2 50 " 10 20 00 " 100
2 to 2½ ft. Bushy..... 1 00 "

" var. elegantissima. Rollinson's Golden. (5 to 6 ft.) A beautiful, upright growing kind, the foliage golden in summer and bronze colored in winter. It is used largely for setting in evergreen beds.

12 to 18 in. \$ 25 each \$1 75 per 100 \$15 00 per 100
3 ft. 50 " 4 00 " 10
4 ft. 1 00 " 7 50 " 10

BUXUS. Box.

Buxus Japonica rotundifolia. (4 to 5 ft.) A round-leaved species, of stout growth and dark green foliage.

12 to 18 in. Bushy..... \$ 35 each \$2 50 per 100 \$15 00 per 100
2 ft. "..... 1 00 " 8 50 " 10

Buxus Japonica aurea. Golden leaved. (4 to 5 ft.) A variety of the rotundifolia having golden leaves.

12 to 18 in. Bushy..... \$ 50 each \$ 4 00 per 10

" **var. Fortuni.** (4 to 5 ft.) Similar to the rotundifolia, but the leaves are not quite as large and are more pointed.

8 to 12 in. Bushy..... \$ 35 each \$ 2 50 per 10

" **sempervirens.** (2 to 3 ft.) The box bush of rounded form so often seen in gardens, and so much used for "Box Edging." Trade customers consider our "Box Edging" the best stock offered, because we grow it very large and strong. A yard such as we sell will plant from 1½ to 2 yards if planted as thin as it is usually set,—then, too, being so vigorous, it produces more effective results. We grow it in solid rows, the plants being from 4 to 5 inches in height. It is well rooted and will give the most satisfactory results.

Extra heavy 50 cents per yard. \$40 00 for 100 yards.

Medium " 35 " 30 00 " "

" **arborescens variegata.** (2 to 3 ft.) A variety of the tree box which has a quicker and more spreading growth, and the foliage of which is yellow and green variegated. A beautiful ornamental variety.

8 to 10 in. Clumps..... \$ 25 each \$ 1 50 per 10 \$ 12 50 per 100

CALLUNA. Scotch Heath.

Calluna vulgaris. (1 to 2 ft.) A low growing, spreading evergreen, bearing purplish white flowers in the early days of July. The blooming continues for some time. It will thrive in shady places and in quite poor or sandy soil.

6 to 12 in. Clumps..... \$ 50 each \$ 3 50 per 10 \$ 30 00 per 100

CEPHALOTAXUS.

Cephalotaxus Fortuni. (3 to 4 ft.) A hardy Chinese evergreen, of medium size, spreading habit and dark green foliage. Somewhat like a yew, but of broader foliage. It can be sheared and made into a close, compact bush. It is a useful sort, in this condition, for planting in evergreen beds.

2½ to 3 ft. Bushy specimens..... \$ 2 00 to \$ 3 00 each.

CRATÆGUS. Evergreen Thorn.

Cratægus pyracantha. A shrub of rather straggling growth, bearing bunches of white flowers in May, and orange colored berries in the autumn.

12 to 18 in..... \$ 35 each \$ 2 50 per 10

CUNNINGHAMIA.

Cunninghamia lanceolata. (30 to 35 ft.) This choice tree thrives well where some protection is afforded it in winter time until it gets well established. In general appearance it resembles an Araucaria, under which genus it used to be classed.

5 to 6 ft \$ 2 50 each

CUPRESSUS.

Cupressus Lawsoniana. Lawson's Cypress. (40 to 50 ft.) This is perfectly hardy, and becomes a pyramidal tree of much beauty. The foliage is deep green, a color it retains all through the winter. A choice tree for lawn planting.

12 to 18 in \$ 35 each \$ 2 50 per 10

2 to 2½ ft..... 50 "

4 ft..... 1 50 "

Cupressus Lawsoniana lutescens. (8 to 10 ft.) A variety of the above with golden yellow foliage. It is of slow growth, and forms a dwarf compact evergreen.

1 foot. Bushy \$ 35 each \$ 2 50 per 10

" **var. stricta viridis.** (25 to 30 ft.) This forms a compact, upright growth, which, with its beautiful dark green foliage, makes it much admired. Desirable as a specimen tree on the lawn or for planting in evergreen beds.

12 to 15 in..... \$ 35 each \$ 2 50 per 10

2 ft..... 50 "

" **thyoides.** White Cedar. (25 to 30 ft.) Found in abundance in the swamps of New Jersey, but flourishing finely in almost any situation. The foliage is small and neat and the tree grows to a good size.

2 to 3 ft. Seed..... 25 each \$ 1 50 per 10 \$ 10 00 per 100

Retinspora squarrosa.

(From a photograph of one of our four and five feet specimen plants offered on page 57.)

PODOCARPUS. Japan Yew.

Podocarpus Japonica. (4 to 5 ft.) An erect, slow growing evergreen, not unlike the Irish Yew, but with broader leaves.

18 to 24 in..... \$ 50 each \$4 00 per 10

PRINOS. Ink Berry.

Prinos glaber. (3 to 4 ft.) A bushy shrub, with small evergreen leaves, and bearing black colored berries in the fall.

8 to 12 in..... \$ 25 each \$1 50 per 10
18 to 24 in..... 35 " 2 50 " 10

RETINISPORA. Japanese Cedar.

Botanical authorities make all varieties of Retinisporas as belonging to one or the other of two species, Obtusa and Pisifera. Originating as they did in Japan, it is almost impossible to say certainly to which one to refer any kind, so we list them under the names we received them. Retinisporas are useful for planting as specimens or in groups when evergreens of medium size are needed. They should be sheared every two years in order to keep them compact and to secure the best color in foliage. All are useful for planting in evergreen beds.

Retinispora ericoides. Heath Leaved. (2 to 2½ ft.) A dwarf, compact grower, the foliage of which changes to iron color in winter.

6 in. Bushy..... \$ 25 each \$1 50 per 10 \$10 00 per 100

" **filifera** (15 to 20 ft.) This has slender, string-like, drooping shoots. Quite distinct from any other. It makes a unique specimen evergreen.

6 to 8 in..... \$ 25 each \$1 50 per 10 \$10 00 per 100
8 to 12 in..... 35 " 2 50 " 10 15 00 " 100

3 to 3½ ft.....	50 "		
6 ft. Bushy.....	1 75 "		

Yucca filamentosa.

YUCCA FILAMENTOSA

This is an indispensable plant in ornamental gardening. There are many places where a clump of dwarf, broad leaved evergreens are necessary, and in such instances the Yucca can be used advantageously. Besides forming a unique mass of green foliage, the effect produced when the plants are in bloom is all that can be desired.

They will thrive in dry and poor soil and in shady places.

Thuja occidentalis Sibirica. (8 ft.) Siberian Arbor-Vitæ. A compact, slow grower, of conical outline, fitting it nicely for hedging purposes.

3 ft. Bushy.....	\$ 75 each	\$6 00 per 10
4 ft. ".....	1 25 "	10 00 " 10
5 ft. ".....	1 75 to 2 00 each

Gardeners

correspondence. GARDENERS SEEKING SITUATIONS should write to us, and we will be very glad to assist them in securing a good situation. We make no charge for this service.

We have a list of gardeners, capable of filling any position, either as assistants or as Superintendents of large estates, and can recommend suitable persons for those having vacancies to fill. We make no charge for this, and would be pleased to answer all

RHODODENDRONS.

THEIR CULTURE, DIRECTIONS FOR PREPARING BEDS AND METHOD OF PLANTING WITH OTHER RARE SHRUBS.

The Rhododendron is one of the most beautiful plants in cultivation, either for planting as a single specimen on the lawn, or in beds. Its heavy, dark green foliage is striking, both in winter and summer, to say nothing of the great masses of varied colored flowers, which are produced in large trusses on the ends of nearly every branch of the plant. The flowers open during the latter part of April and the early part of May, and, as all the buds do not open at the one time, there is always a profusion of bloom for a period of several weeks. The finest effect is produced by planting in beds; the number of plants in a bed is immaterial, though, naturally, the larger the bed and the more plants there are in it, the greater will be the display.

It is a mistaken idea, that many have, that Rhododendrons are not hardy. Of course, like all other trees and plants, some varieties will not stand our climate; but we have been handling these plants so long that we are thoroughly conversant with those varieties best suited for this country, and on no account would we send anything else but the very best ones.

We have frequently been asked whether Rhododendrons need any especial care. They do not, though like everything else they can be made to grow better and give finer bloom if some extra care be given to their cultivation.

Rhododendrons have a mass of small, hair-like, fibrous roots; and it has been found that when the soil is light, and good drainage given them, they do especially well. While they like plenty of water, they are averse to having it stagnate about the roots.

When planning a bed of Rhododendrons, it would be well to see that the following directions are observed in preparing it, so as to produce the very finest effect: The soil should be dug out about four feet deep and the bottom filled in with about two feet of broken stone or similar material, finishing with about two-thirds good top-soil—sod, if it can be procured—and one-third sand, with a good sprinkling of well-rotted stable manure. Prepared in this way it will be cool and moist all the time. The plants can be set right in this bed, putting them about three or four feet apart, according to the sized plants used, and they will thrive, bloom and give more pleasure than anything else you could plant.

Some varieties grow faster than others, and if the bed is to be viewed from all sides, the largest plants should be placed in the middle, but otherwise they should be planted at the back of the

bed. A glance at the plants will at once enable any one to select the taller growing ones from the others. In supplying these plants, we always put in a portion of the taller growing ones for this purpose.

A very pretty and desirable effect can be produced by mixing in a few of the hardy *Ghent* and *Mollis Azaleas* along the outer edges of the bed. These do not grow as large as Rhododendrons, and as they have entirely different colored flowers, they materially add to the beauty of the bed.

A comparatively unknown plant—*Andromeda floribunda*—will also be found valuable in this connection. It has light green leaves, which it retains all winter. The flowers are white and in sprays, completely covering the plant, and looking not unlike sprays of Lily of the Valley. It blooms very early in the spring, and would be the first to open when used in connection with the other plants noted in this article. It is not a fast growing bush, and would rarely make a tall plant, but rather spreading. It is perfectly hardy and desirable in every way, and several plants should be used in every Rhododendron bed.

To make a complete finish, put a row of the creeping *Daphne cneorum* around the extreme border of the bed. It is a most charming plant, with beautiful, fragrant, pink flowers. It blooms almost the entire summer and fall. It is very hard to secure good plants, or, in fact, plants of any kind, and we feel particularly pleased at having been able to get a few of them—probably five hundred plants in all.

While Rhododendrons require no winter protection, we have found it to be time well spent to fill forest leaves, straw, hay or similar material in among them late in the fall. It keeps severe winds from the plants and frost from their roots, and they always look better for it in the spring. An occasional top dressing of well-rotted stable manure will also be advantageous.

Album elegans, white.
B. W. Elliot, deep rose, dark spots.
Blandyanum, rosy crimson.
Cyaneum, purple.
Catawbiense, seedlings.
Duchess of Bedford, crimson, light centre.
Delicatissimum, clear white, tinted with pink.

Everestianum, rosy lilac.
John Walter, rich crimson.
Minnie, bluish white, upper petals yellow.
Michael Waterer, brightest scarlet crimson.
Perspicuum, good white.
Pictum, clear white, orange spots.
Queen, fine white.
Roseum elegans, rose.

3 ft. " 40 " 3 00 " 10
4 ft. " 50 "

ARISTOLOCHIA. Pipe Vine.

Aristolochia Sipho. Dutchman's Pipe. The common name comes from the resemblance of the flowers to an old style pipe. The leaves are very large.

12 to 18 in. from pots..... \$ 25 each

VINES SELECTED by customers in the nurseries will be charged for accordingly. When customers do not specify the size or price of the vine wanted, it must be taken for granted that the selection of a suitable size is left to our judgment.

Aristolochia tomentosa. This has smaller leaves and does not make the strong appearance the other does.

12 to 18 in..... \$ 25 each \$1 50 per 10

BIGNONIA. Trumpet Vine.

Bignonia capreolata. Evergreen Trumpet Vine. (Self-climber.) This beautiful vine will cling to rough walls and surfaces, but not to such smooth ones as those named below will. The orange yellow flowers come in May.

12 to 18 in..... \$ 35 each \$2 50 per 10

" **grandiflora**. Chinese Trumpet Vine. (Self climber.) This beautiful species bears large yellowish scarlet flowers. It is less rampant of growth than the next.
2 to 3 ft. Strong..... \$ 35 each \$2 50 per 10

" **radicans**. Common Trumpet Vine. (Self-climber.) A most useful, strong growing native vine, clinging tightly to whatever its growing shoots touch, and bearing clusters of scarlet flowers in July and August.

6 to 8 in..... \$ 25 each \$1 50 per 10 \$10 00 per 100
2 ft. Strong..... 35 "

" **Thunbergii**. (Self-climber.) Differing from the last in having crimson instead of scarlet flowers.

2 ft. Strong..... \$ 35 each \$2 50 per 10 \$15 00 per 100

CELASTRUS. Bitter Sweet.

Celastrus articulata. This species flowers and fruits when quite small, and quite freely. From Japan.

2 to 3 ft. Strong..... \$ 35 each \$2 50 per 10 \$15 00 per 100
3 to 4 ft. " 50 " 3 50 " 10 25 00 " 100

" **punctatus**. A Japanese species, famed for its scarlet pods and fruit in the autumn and winter.

2 to 3 ft. Strong..... \$ 35 each \$2 50 per 10 \$15 00 per 100
3 to 4 ft. " 50 " 3 50 " 10 25 00 " 100

" **scandens**. Our native species, known as Staff Vine, Bitter Sweet, etc. The scarlet fruit hangs on the vine all through the winter.

12 to 18 in..... \$ 25 each \$1 50 per 10 \$10 00 per 100
18 to 24 in. Strong..... 35 " 2 50 " 10 15 00 " 100

CLEMATIS.

Clematis flammula. Sweet Clematis. The feathery, white, sweet scented flowers of this vine makes it much called for.

Strong 4-year clumps..... \$ 35 each \$2 50 per 10 \$15 00 per 100

" **paniculata.** A new introduction from Japan, and one of great merit. It is a strong, rapid and vigorous grower, and in late summer it produces sheets of medium sized, pure white flowers of the most pleasing fragrance. It is perfectly hardy and finely adapted for covering trellises or fences.

2 year plants..... \$ 50 each \$3 50 per 10

4 " extra strong flowering plants..... 75 " 6 50 " 10

" **Virginiana.** Wild Clematis. One of the fastest growing of all. The flowers are white, in clusters, succeeded by feathery white seeds.

3 year clumps..... \$ 35 each \$2 50 per 10 \$15 00 per 100

" **vitalba.** English Clematis. Virgin's Bower. Of much resemblance to the last named, and like it, of extremely fast growth.

2 year clumps..... \$ 25 each \$1 50 per 10 \$10 00 per 100

" **viticella.** This is largely used for covering banks, rocks, or for any similar purpose. Flowers purple, about two inches in diameter. It is a good, strong grower, and perfectly hardy.

Strong 4 year roots..... \$ 25 each \$1 50 per 10 \$10 00 per 100

LARGE FLOWERED CLEMATIS.

The Clematis, always a great favorite, because of its usefulness for purposes where vines are required, as well as for the beauty of its flowers, has gained even a firmer foothold than before, within a few years past, and chiefly because of the great strides made in the production of kinds with large and handsome flowers. It is now a good many years ago since the magnificent Jackmanni was introduced, and, though unequalled yet in its general usefulness and large purple flowers, there are other kinds of different colors which command universal admiration. And it must not be forgotten that these large flowered ones do not end their display with the one course of flowers, but have occasional blossoms at intervals throughout the season,

Prices, extra large, two and three years old, 50 cents each, or \$4 00 per 10.

Azurea grandiflora, lilac.

Bangholme Belle. A new variety, pure white, extra large flowers.

Duchess of Edinburg, white.

Cypsy Queen, rich, dark, velvety purple.

Jackmanni, violet purple.

Lanuginosa Belisaire, lavender.

Star of India, reddish plum, red bars.

DECUMARIA.

Decumaria barbara. (Self climber.) A native vine, clinging by rootlets, as ivy does. Its foliage is shining green, and in the latter part of June it bears clusters of white flowers.

2 to 3 ft. Strong, from pots..... \$ 35 each \$3 00 per 10 \$20 00 per 100

DIOSCOREA.

Dioscorea batatas. Cinnamon Vine.

Strong 3 year roots..... \$ 35 each \$2 50 per 10

DOLICHOS. (Pueraria.) Kudzu Vine.

Dolichos Japonicus. An extremely fast growing vine, with very large leaves, and bearing small racemes of rosy purple pea-shaped flowers towards the close of August. Mr. A. H. Olmsted, of Hartford, Conn., whose residence, with the Dolichos growing upon it, is illustrated opposite, writes of this vine; "I have used them only for decoration of balcony heretofore, but this year gave them rope up to loggia, and they were not satisfied with that (45 feet), but I believe would have grown to the very pinnacle on top of roof, if allowed to. It is a veritable 'Jack-and-the-Bean-Stalk' vine" One plant by mail 35 cents. 2 to 3 ft. Strong..... \$ 35 each \$2 50 per 10 \$15 00 per 100

EUONYMUS.

Euonymus radicans. This is a self-clinging vine, slow growing until it gets well started. It clings to walls as ivy does.

12 to 18 in. Strong. \$ 25 each \$1 50 per 10 \$10 00 per 100

" **var. variegatus.** A variety of the above with variegated leaves.

12 to 18 in. Strong. \$ 25 each \$1 50 per 10 \$10 00 per 100

GELSIMUM. Carolina Jasmine.

Gelsimum sempervirens. A well-known vine to those who visit the South, where it is found wild, clambering over bushes and up small trees. Its golden yellow blossoms appear early in spring.

8 to 12 in..... \$ 35 each \$2 50 per 10

HEDERA. Ivy.

Hedera Helix. English Ivy. The old, common ivy. This is hardy here, and does especially well when planted on the eastern or northern side of buildings, where it is free from the sun in winter.

2 to 2½ ft. Strong. \$ 25 each \$1 50 per 10 \$10 00 per 100

HYDRANGEA.

Hydrangea scandens. Climbing Hydrangea. This has large leaves and bears large heads of white flowers in early June. It makes a heavy growth, advancing slowly until well established.

1 year, from pots..... \$ 35 each \$2 50 per 10

JASMINUM.

Jasminum nudiflorum. Yellow Jasmine. This is half vine and half shrub. It can be used either way. Its beautiful yellow flowers expand just as soon as winter disappears.

12 to 18 in..... \$ 25 each \$1 25 per 10 \$10 00 per 100

18 to 24 in..... 35 " 2 00 " 10 15 00 " 100

2 ft. Strong..... 50 " 3 50 " 10

" **officinale.** This is the hardy white Jasmine, bearing its sweet scented, white flowers in June.

12 to 18 in..... \$ 25 each \$1 25 per 10

2 to 3 ft. Strong..... 35 " 2 00 " 10 \$12 50 per 100

Euonymus radicans variegatus.

LONICERA. Honeysuckle.

Lonicera Belgica. Monthly Honeysuckle. The yellow flowers are pink in the bud and cream colored when expanded. It is of half-bushy nature.

18 to 24 in.....\$ 25 each \$1 50 per 10 \$10 00 per 100
2 to 3 ft. Strong.....35 " 2 50 " 10 15 00 " 100

" **brachypoda.** Japanese Evergreen. A dense growing sort, with shining evergreen leaves and blooming freely about the middle of June.

12 to 18 in.....\$ 25 each \$1 50 per 10 \$10 00 per 100
18 to 24 in. Strong.....35 " 2 50 " 10 15 00 " 100

" **var. aurea reticulata.** A golden-leaved variety of much beauty. Does not grow as large as the preceding one.

18 in.....\$ 25 each \$1 50 per 10 \$10 00 per 100

" **flava.** Yellow Flowered. A free growing sort, bearing bunches of yellow flowers.

1 to 2 ft.....\$ 25 each \$1 50 per 10 \$10 00 per 100
3 to 4 ft. Strong.....35 " 2 50 " 10 10 00 " 100

" **Halleana.** One of the fastest growers of all. Excellent where a rapid grower is wanted. The yellow flowers come late in June, and it blooms a little through the summer and freely in the fall.

12 in.....\$ 25 each \$1 50 per 10 \$10 00 per 100
18 to 24 in. Strong.....35 " 2 50 " 10 15 00 " 100

" **semperflorens.** English Honeysuckle. This is the sweet scented Honeysuckle, found growing in the English Hedge rows. It is a profuse bloomer, — flowers, yellow, tinged with white.

2 ft.....\$ 25 each \$1 50 per 10 \$10 00 per 100

" **sempervirens.** Scarlet Coral. A native species, bearing heads of scarlet flowers in the last days of June.

2 ft.....\$ 25 each \$1 50 per 10 \$10 00 per 100

" **sinensis.** Chinese Honeysuckle. This has reddish foliage and reddish flower buds. When expanded, creamy white petals are displayed.

12 to 18 in.....\$ 25 each \$1 50 per 10 \$10 00 per 100
18 to 24 in. Strong.....35 " 2 50 " 10 15 00 " 100

LYCIUM. Matrimony Vine.

Lycium Chinense. A neat, half climbing plant, bearing small, light pink flowers in summer, followed by berries which turn to a beautiful scarlet in the fall, when it is very ornamental.

18 to 24 in.....\$ 25 each \$1 50 per 10 \$10 00 per 100

Hedge of Norway Spruce at Wyncote, Pa.
(Planted by our firm 40 years ago and still in excellent condition.)

HEDGE PLANTS.

DIRECTIONS FOR PLANTING.

SOIL. In planting hedges, care should be taken to secure a quantity of good top-soil with which to fill in about the roots of the plants. This is especially the case when evergreen hedges are to be planted as they require a great deal of nourishment to keep them healthy and of a good, rich color. Well-rotted stable manure should also be worked in the trench with the soil. Do not cramp the roots in a small, narrow trench; dig a good wide one so that the roots can be spread out flat and still not touch the sides of it.

MANURE. After the trees are planted, put a coating of manure on the surface of the soil around the plants, covering all the earth that has been disturbed in the planting. This mulch should be left on for a year, and finally worked into the ground.

EVERGREENS, running in size from 12 to 24 inches, can be planted about 8 to 12 inches apart in the rows; but the larger sizes, from 2½ to 3½ feet, must be set about 18 inches apart. They should be pruned when planted; it tends to make the plants more bushy, making the shapening of the hedge an easy matter afterwards.

DECIDUOUS PLANTS. The distance these should be set apart will depend mainly upon the character of the plants purchased. One and two year old seedlings or cuttings should be set about six inches apart, though if planted in a double row they may be set 8 inches

apart. Bushy, transplanted stock in sizes from 2 to 3 feet may be set 12 inches apart, or if in double rows, 15 inches apart. Larger plants would be set according to their size.

DOUBLE-ROW HEDGES. These are made where a very thick and dense hedge is required, and they make much the best hedges under any condition. The plants are set in two rows, each row about 6 to 9 inches apart, according to the size of the plant used, and the plants from 6 to 15 inches apart.

OUR PLANTS are particularly fine for hedging purposes, especially those marked "Trans." These, if set out as directed, and cut back to within a few inches of the ground, will push up strong stems and form a very thick, bushy hedge. They will make a good, strong hedge if not pruned back at once, but we always advise pruning as being the best plan in the end. The seedling plants will also make good hedges in time, though naturally not as soon as the transplanted stock. They must be cut to the ground as soon as planted, and if cut back again the second year they will make even a stouter hedge. These plants are particularly useful when it is intended to plant double rows. Strong growing plants like the Honey Locust, Osage Orange and Buckthorn, are always sold as seedling plants, it being seldom that transplanted stock is used.

Arbor-Vitæ, American. This is a good hedge plant for low, damp ground, and especially where a compact, upright growing evergreen is wanted. It can be trimmed to form a wall not more than two feet wide at the bottom and the same at the top, and in this respect it is frequently used as a hedge around a vegetable garden.

12 to 15 in.....	\$ 25 each	\$1 25 per 10	\$8 00 per 100

6 ft.	1 00 "	7 50 " 10	60 00 " 100

Hemlock Spruce. This is largely used, and especially around Philadelphia. It makes a good, hardy hedge, and is very dense and neat in its growth. It will not thrive in a low situation but can be grown in dry and stony ground, and in any ordinary location.

8 to 12 inches.....	\$1 25 per 10	\$10 00 per 100	\$75 00 per 1000
12 to 15 inches.....	1 75 " 10	15 00 " 100	100 00 " 1000
18 to 24 inches.....	2 50 " 10	20 00 " 100	150 00 " 1000
2 to 2½ ft. Bushy.....	4 00 " 10	35 00 " 100	

Norway Spruce. (See illustration page 64.) This is a good, strong growing evergreen, and makes one of the finest of hedges. It is very hardy and grows very dense and bushy. Its rich green foliage is particularly attractive. Like all evergreens it does best in good rich soil, and it should be frequently mulched with rotten manure. We recommend it as one of the best evergreen hedge plants.

12 to 18 inches.....	\$1 50 per 10	\$10 00 per 100	\$75 00 per 1000
18 to 24 in. Seedlings.....	1 00 " 10	6 00 " 100	40 00 " 1000
18 to 24 in. Bushy.....	2 50 " 10	15 00 " 100	100 00 " 1000

3 ft.	3 50 " 10	20 00 " 100	150 00 " 1000

For additional sizes of Norway Spruce see page 51.

Box Edging. This is the dwarf Box Edging used in all old gardens and which is now again in great demand for edging garden walks and similar situations. Our plants are particularly strong, and always give satisfaction. They are grown from large, strong cuttings, and we give them ample time to root. The extra large stock will be found particularly effective. (Read description of this stock on page 53.)

Extra heavy.....	\$ 50 per yard	\$40 00 per 100 yards
Medium.....	35 " "	30 00 " 100 "

Althæa. These plants make one of the most beautiful flowering hedge plants, blooming at a season when few other plants are in flower. The large Hollyhock-like flowers making a very attractive appearance, especially when the hedge is composed of the different varieties.

Assorted varieties, 1 to 2 ft. Cuttings.....	\$ 1 25 per 10	\$ 8 00 per 100	\$60 00 per 1000
2 ft. Trans.....	2 50 " 10	15 00 " 100	100 00 " 1000

(For additional sizes and prices of Althæa see Hibiscus page 37.)

Beech, American. This is being largely used now for a good, hardy, ornamental hedge. Though it is naturally a strong grower, it can be trimmed into a good solid hedge by constant pruning. It seems especially adapted for this purpose for planting near the sea coast, and in places where many other hedge plants are not hardy or will not thrive. It likes a rich soil, though it will grow and produce good results on a poor and stony ground.

2 to 3 ft. Seed.....	\$1 00 per 10	\$8 00 per 100
2 to 3 ft. Trans.....	2 50 " 10	15 00 " 100
3 to 4 ft.	3 50 " 10	25 00 " 100
4 ft.	6 00 " 10	50 00 " 100
5 ft.	10 00 " 10	70 00 " 100

Beech, European. The European Beech is used quite as much as the American, and it has the additional advantage of being more twiggy and of holding its dead leaves throughout the winter. On this account it makes more of a screen in the winter than any other deciduous hedge plant. The Beech should be sheared as often as necessary in order to keep it bushy, and when planted it should be cut to the ground several times in order to make it thick at the bottom.

12 to 15 in.	Seed.....	\$ 75 per 10	\$ 6 00 per 100
2 to 3 ft.	Trans.....	2 50 " 10	15 00 " 100
3 to 4 ft.	".....	3 50 " 10	25 00 " 100

5 ft.	".....	10 00 " 10	70 00 " 100

Berberry, Green-leaved. A very good ornamental hedge and one that is also more or less defensive, can be made by the use of the Berberry. It is a fairly strong grower, and the branches being completely covered with small thorns make of it a particularly solid hedge. In the spring it is covered with small yellow flowers, followed later by bright red berries. It makes a very attractive plant. It will grow in quite low situations, and equally as well on high ground.

" **Purple-leaved.** It is of exactly the same character as the green-leaved, with the exception that the foliage is purple, and on this account it is very largely used.

18 to 24 in.	Seed.....	\$ 1 00 per 10	\$ 6 00 per 100
18 to 24 in.	Trans.....	1 50 " 10	12 00 " 100
3 ft.	".....	2 00 " 10	15 00 " 100

" **Thunberg's.** Of all the deciduous shrubs, we know of none that we would recommend as highly for a low, dwarf hedge, as we do this. The twigs and branches are quite low, and they are completely covered with small thorns. The plant grows extremely thick right from the ground, frequently sending strong shoots from the collar. It will not make a hedge of more than 3 or 4 feet in height in many years. It requires little pruning to keep it in shape. The leaves are small, light green, and towards fall assume the most brilliant color. The berries also turn bright scarlet when they are ripe. The plant seems to thrive in almost any situation.

6 to 10 in.	Seed.....	\$ 1 00 per 10	\$ 8 00 per 100
12 to 15 in.	".....	1 50 " 10	10 00 " 100
3 ft.	Bushy.....	3 50 " 10	25 00 " 100

Buckthorn. While being used as an ornamental hedge, it is perhaps in greater demand for hedging around farms and large places. It makes a very stiff and solid hedge, and if cut back to the ground several times after planting, it becomes very thick at the bottom. It is extremely hardy and is in great demand on this account, in the northern and north-western States.

6 to 8 in.	Seed.....	\$ 75 per 10	\$ 4 00 per 100
18 to 24 in.	".....	1 00 " 10	6 00 " 100
2 to 2½ ft.	".....	1 50 " 10	10 00 " 100
3 to 4 ft.	".....	2 00 " 10	15 00 " 100

Hardy Orange. This plant has been recommended highly for hedging purposes within the last few years, and where it is hardy we think that but few other plants can compare with it as a strong, defensive hedge. The spines are from 2 to 3 inches long and very stout, and if the hedge is trained properly when young, we think it would be impossible for any animal to get through it. We doubt if it would be hardy much further north than Pennsylvania. With us it stands the winter perfectly.

12 to 15 in.	Seed.....	\$ 75 per 10	\$ 5 00 per 100
18 in.	".....	1 00 " 10	6 00 " 100

Hawthorn, American. The large, strong spines of the American Hawthorn, make it a strong defensive hedge. It is also very hardy, and can be used anywhere in this country.

6 to 10 in.	Seed.....	\$ 1 00 per 10	\$ 7 00 per 100
12 to 18 in.	".....	1 50 " 10	12 00 " 100

" **English.** while not as strong a grower as the American, nor having its spines as large, yet its thick, bushy growth makes it an excellent hedge plant, and one that is impenetrable by animals. It is the thorn used almost wholly throughout England for hedging purposes.

8 to 10 in.	Seed.....	\$ 75 per 10	\$ 6 00 per 100
2 to 3 ft.	".....	1 00 " 10	8 00 " 100
4 to 5 ft.	Bushy.....	3 00 " 10	25 00 " 100

Honey Locust. This is also used largely for farm hedges, and being one of the hardest plants it is in great demand in the very cold States. The stems are very prickly, and it is one of the best defensive hedges.

6 to 8 in.	Seed.....	\$ 75 per 10	\$ 6 00 per 100
18 to 24 in.	".....	1 00 " 10	7 00 " 100

Hornbeam, American. This resembles the American Beech very much, but it is not as strong a grower, and it is perhaps a better hedge on this account. It makes a good, hardy hedge anywhere in the United States.

2 to 3 ft.	Seed.....	\$ 1 50 per 10	\$ 12 00 per 100
3 to 4 ft.	Bushy.....	3 50 " 10	25 00 " 100
4 to 5 ft.	".....	5 00 " 10	35 00 " 100

" **European.** This is more twiggy and makes perhaps a more dense hedge than the American, and it also holds its dead leaves throughout the winter, making it somewhat of a screen.

2 to 3 ft.	Trans.....	\$ 3 00 per 10	\$ 20 00 per 100
------------	------------	----------------	------------------

Osage Orange. This is the well-known Osage hedge plant used so extensively throughout the Middle and Southern States. By careful pruning, it makes a strong, defensive hedge that will turn cattle. It is largely used on farms and along roadways.

1 year, 1st class.....	\$ 75 per 100	\$ 4 00 per 1000
2 " ".....	1 25 " 100	8 00 " 1000

Privet, California. Of all the ornamental hedge plants, this is the most highly prized. If cut to the ground one or two years after planting it makes a very thick hedge right from the bottom, sending up many strong shoots. The leaves are a rich green and will remain on the plants up to Christmas, and if they are a little sheltered they will keep green almost all winter. This is especially the case if the hedge has attained some age and has frequently been trimmed. Though it is a strong grower it can be kept to a low size by frequent trimming. We illustrate on page 67, a hedge of the California Privet on the grounds of Mr. A. H. Mason, which is at least 10 years old, and it is no more than 18 inches high, having been kept that low by constant trimming. At Newport, R. I., there are a great many hedges of this plant that are 6 and 7 feet in height, which have been trimmed flat on the sides, so that they look like a solid green wall. It seems to thrive particularly well near the sea coast; and the Privet Hedges at Newport are one of the great attractions. Drought does not seem to injure it in any way. The roadway shown on the right of the illustration descends quite rapidly, leaving the hedge at least 10 feet above it. There are many large Chestnuts and other trees at this point, yet the dry weather of last summer did not seem to injure it in the least. We know of a hedge that is planted close beside a row of large Silver Maples, yet it seems to thrive.

12 to 18 in.	Cuttings.....	\$ 75 per 10	\$ 4 00 per 100

Hedge of California Privet, (*Ligustrum ovalifolium*.)

(On the grounds of Mr. A. H. Mason, Germantown. The roadway descends sharply on the right of the photograph, leaving the hedge about 10 feet above the road at the top of a wall, showing that this plant will thrive in very dry situations.)

HYBRID PERPETUAL ROSES.

The varieties offered by us are the best of the great number which have been sent out in the past, and are such sorts as are now the most largely in demand.

Hybrid Roses like a good, rich soil, and the ground should be given a coating of manure every winter, if the finest flowers are desired. Well-rotted cow manure is the most effective, but if that is not to be easily had, horse manure will answer the purpose.

Strong budded plants,..... \$ 35 each \$2 50 per 10 \$15 00 per 100

COPYRIGHT 1895 BY A. BLANC

New Climbing Rose "Crimson Rambler."

The best flowers will of course be had on plants that are strong and healthy, and that are carefully pruned. The flowers are always on the straightest shoots, and these should be but lightly pruned, but the weak stems should be cut back closely.

When planting new plants, they should be cut back to within 18 inches of the ground, so that the plants will push out plenty of roots before making too much growth.

Alfred Colomb. A superb sort, and one of the best known. Very large, full, and of globular form; very fragrant, and a strong grower. Color: bright carmine crimson.

Abel Crant. Valuable for its flowers in autumn. Large, full and fragrant. Color: silvery pink.

Anne de Diesbach. A well-known sort of much beauty. It is a vigorous grower, and the flowers are of immense size, and very fragrant. Color: bright carmine.

Baroness de Rothschild. While this sort is of rather dwarf growth, it is very hardy and one of the most beautiful, although the flowers are without fragrance. It is a late bloomer. Color: delicate pink.

Captain Christie. A large finely formed flower, very free bloomer, and perhaps one of the best of this class. Delicate flesh color, deepening in shade toward the centre.

Countess of Oxford. A moderate grower, very large and full, but not fragrant. Wood almost thornless; a very profuse bloomer. Color: bright carmine.

Dupuy Jamain. Large, well-formed and fragrant; a good, free grower. Color: cherry red, with a shade of crimson.

General Appert. Extra large size, fine full form; good substance, and very sweet. Color: grand violet crimson, very rich and velvety.

General Jacqueminot. Probably the best known of all roses; very large, a free bloomer, and fragrant. Color: brilliant crimson.

Jean Liabaud. Large, full, and fragrant; a beautiful dark rose. Color: crimson maroon.

John Hopper. A well-known sort, esteemed by all who know it as a garden rose of the highest order. Color: bright rose with crimson centre.

Jules Margottin. A free-flowering, large, full and hardy rose, slightly fragrant. Color: carmine.

La France. The model garden rose; blooms all summer. Large, full and globular. The sweetest of all roses. Color: silvery rose, changing to pink.

Luciole. A grandly beautiful rose; the flowers are extra large, somewhat cupped form, but quite full and double; delightfully perfumed. Color: clear cherry red, with rich golden yellow centre, elegantly shaded.

Md. Alfred Carriere. Very double; large, full, sweet flowers. Color: rich creamy white, tinged with pale yellow.

Merveille de Lyon. A superb rose, of moderate growth; flower extra large, and of a beautiful cup shape. Color: bluish white.

Paul Neyron. A strong grower, and one of the most prolific bloomers in the hybrid class. Flower of immense size, often five inches in diameter. Color: deep rose.

Ulrich Brunner. A vigorous and hardy sort, and always a favorite with every one. Flowers large and full, with shell-shaped petals. Color: cherry red.

Victor Verdier. A beautiful rose of moderate growth. It is a free bloomer, with extra large and full flower. Color: bright rose, with carmine centre.

HYBRID CHINA ROSE.

Md. Plantier. An old variety that is still largely planted. It grows in a fine, bushy form, and produces clusters of flowers in great abundance, in June. Color: pure white. 35 cents each. \$2 50 per 10.

CLIMBING TEA ROSES.

These varieties are hardy in the latitude of Philadelphia, and are excellent climbing roses. 35 cents each. \$2 50 per 10.

Md. Berard. A vigorous grower; similar to its parent, the Gloire de Dijon, but much finer when in bud. Color: creamy white, with amber and pale blush.

Reine Marie Henriette. One of the finest climbing tea-roses in cultivation. Flowers have long, pointed buds. Color: rich cherry crimson.

HARDY CLIMBING ROSES.

Strong plants 2 to 2½ feet, on their own roots, 35 cents each. \$2 50 per 10.

Baltimore Belle. Flowers in large clusters; an old variety, but still one of the best. Color: bluish white, changing to light rose and carmine.

Crimson Rambler. The most widely advertised and most popular climbing rose of the year, and deservedly so. It is a rapid grower. The flowers are bright crimson, and are produced in great trusses. Extra strong, field-grown plants, 50 cents each, \$3 50 per 10. From 2 inch pots, 25 cents each, \$2 00 per 10.

Prairie Queen. A strong and rapid growing rose. Large, compact and globular flowers in clusters. Color: bright rosy red.

HARDY FERNS.

Ferns might be used in gardens much more than they are, for not only are they beautiful in summer, but many of them are evergreen, affording something green for rock work and other places in winter time. Ferns like shade, but at the same time must have some air. Damp, shady places are the ones they prefer, and as such spots do not suit many plants, ferns are especially valuable for the purpose.

Evergreen sorts are marked (E)

Adiantum pedatum, Maiden Hair Fern.
Asplenium b neum, Ebony Spleenwort. (E.)
 " **Felix-fœmina.**
 " **spindulosum.**
 " **thelypteroides,** Silvery Spleenwort.

Aspidium acrostichoides, Christmas Fern. (E.)
 " **marginale,** Marginal "
 " **Noveboracense,** New York "
 " **Thelyptera,** Lady "
Botrychium Virginicum.
Onoclea sensibilis, Sensitive "
Osmunda Claytoniana, Flowering "
 " **cinnamomea,** Cinnamon "
 " **regalis,** King "
Polypodium hexagonopterum "
 " **vulgare.** (E.)
Woodsia obtusa, Rock Polypod "
 " **Virginica.**

HARDY GRASSES.

Figures in brackets, indicate about the height of the plant when fully grown.

Arundo donax. (12 to 15 feet.) 35 cents each. \$2 50 per 10. Extra strong clumps, 50 cents to \$1 00 each.

" **var. variegata.** (5 to 7 feet.) 35 to 50 cents each.

Calamagrostis stricta variegata. (8 to 10 inches.) 35 cents each. \$2 50 per 10. \$10 00 per 100. Extra sized clumps, 35 to 50 cents.

Erianthus Ravenna. (8 to 10 feet.) 35 cents each. \$2 50 per 10. \$15 00 per 100. Extra sized clumps, 50 cents to \$1 00 each.

Festuca glauca. (6 to 8 inches.) 25 cents each.

Eulalia Japonica. (8 to 10 feet.) 35 cents each. \$2 50 per 10. \$15 00 per 100. Extra sized clumps, 50 cents to \$1 00 each.

" **var. variegata.** (5 to 7 feet.) 35 cents each. \$2 50 per 10. \$15 00 per 100. Extra sized clumps, 50 cents to \$1 00 each.

" **var gracillima univittata.** (5 to 7 feet.) 35 cents each. \$2 50 per 10. \$15 00 per 100. Extra sized clumps, 50 cents to \$1 00 each.

Cynierium argenteum. Pampas Grass. (8 to 10 feet.) 35 cents each. Extra sized, 50 cents to \$1 00 each.

RUDBECKIA LACINIATA GOLDEN GLOW.

The Rudbeckias are among the most beautiful of our fall-blooming Wild Flowers, and are always greatly admired. Until recently no effort had been made to improve them as has been done with nearly all other flowers. But with the introduction of the "Golden Glow," we have a variety that would seem to defy improvement, as it is in itself a remarkably beautiful form. The parent has but single flowers, yellow petals with a purple conical disk in the centre, but, as will be seen by the illustration, this disk is entirely hidden by the mass of petals which go to make up this double flower.

The plant is entirely hardy, and will thrive in poor soils, though attaining the greatest perfection in a rich, loamy one. It grows to a height of six feet, blooms profusely and continuously, and makes a desirable plant for cut-flower purposes.

Wm. Falconer, in *Gardening*, says of it: "* * * it is a good thing, and more elegant and beautiful than the double-flowered sun-flower (*Helianthus multiflorus*, fl. pl.). We got a little plant of it last winter, and in the spring planted it out in the garden in good soil. It is now six feet high, much branched, the branches inclining upwards and in bloom. *We hail it with delight as being one of the most distinct and beautiful large growing, hardy perennials that have been introduced for years.*"

Price, 35 cents each, post paid. \$2.50 per 10.

Landscape Gardening

We call particular attention to this branch of our business. It is under the personal direction of our J. Franklin Meehan.

We prepare plans for grading, road-making and planting, either separately or for the entire work, and carry out these plans on the most favorable terms.

We also prepare plans for remodelling old places; superintend the carrying out of them or do the entire work ourselves.

Plans furnished for Hardy Herbaceous beds or gardens, shrubbery plantations, etc.

HARDY HERBACEOUS PLANTS.

The value of hardy herbaceous plants to a garden has long been known to those fortunate enough to have a collection of them. Bedding plants from the green house will always be needed, because of the flowers of some and the bright foliage of others. But they can never displace perennial plants in the popular affection. Columbine, Larkspur, Veronica, Flag, Phlox, Pink, Canterbury Bell, Hollyhock, and similar flowers are household words with lovers of flowers, as much so, almost, in our country as in the old world. When perennial plants are once in the garden, they may be said to be there forever. As each succeeding spring comes, the warm days bring forth the different kinds to greet us, and they truly become as old friends to us; and we look for them and value them as we cannot do the annual and transitory ones from the greenhouse. And for making displays at certain periods of the season, how useful they are! What a show large masses of Phlox procumbens make in early spring? See the uses to be made of the low-growing Sedums, Cactuses, Sempervivums, Armerias, Ajugas and like plants! Masses of Day Lilies, Flags and Columbines can be made which will make a grand

show. Then, when fall comes, and the many composite plants bloom, what effects are made by the yellow flowers of the Coreopsis, Helianthus and the Chrysopsis, and such other kinds with other colors, such as the Boltonias and Asters!

While individual plants are very pretty, the most striking effects are produced by setting several plants of one kind in a clump. Thus six plants of Helianthus, or a dozen of Lychnis, planted in a group would make a greater display than if six different sorts were planted together, as the mass of one color would attract the eye.

PRICES. Special Notice:—The plants offered by us are nearly all field grown, and the clumps in most cases from three to four times as large as those furnished by others,—making our prices really lower. Customers, when comparing prices, should take this into consideration. We will furnish the small-sized plants when so ordered at ½ discount from prices named in the catalogue. *Special prices* given for large quantities.

Achillea millefolium rubrum , Deep Rose. July and August. 1 foot.....	\$ 15 each	\$1 25 per 10
" mongolica . White. July.....	15 "	1 25 " 10
" Ptarmica plena . "The Pearl," White, Double. July and August. 2 feet.....	15 "	1 25 " 10
Achilleas are spreading plants, especially the first named, soon carpeting the ground with green foliage. The flowers of "The Pearl" are invaluable for cutting.		
Actinomeris helianthoides . Yellow. July. 3 feet.....	15 "	1 25 " 10
" squarrosa . Yellow. July. 3 feet.....	15 "	1 25 " 10
These are some of the autumnal composite plants, to which we owe so much of the beauty of that season.		
Ægopodium Podagraria variegata , White. June. 1 foot..	15 "	1 25 " 10
Agrostemma (Lychnis) coronaria . Crimson. June. 2 feet	20 "	1 50 " 10
This has silvery green foliage, which sets off the deep crimson flowers to great advantage.		
Ajuga reptans . Blue. May. 4 inches.....	15 "	1 25 " 10
" genevensis . Blue. May. 4 inches.....	20 "	1 75 " 10
" calycina . White. May. 2 inches.....	15 "	1 25 " 10
Ajugas are fine plants for covering bare ground, soon spreading and forming a green mat of leaves.		
Allium senescens , Dull Pink. July. 1½ feet.....	15 "	1 25 " 10
" Camptchaticum . Dull Pink. July. 1½ feet.....	15 "	1 25 " 10
" fiavum . Pink. June. 18 inches.....	15 "	1 25 " 10
Althæa officinalis . Whitish Pink. July. 3 feet.....	15 "	1 25 " 10
Amsonia latifolia . Blue. June. 2 feet.....	15 "	1 25 " 10
Antemis Biebersteiniana , Yellow. July and August. 18 inches.....	15 "	1 25 " 10
" nobilis . White. June. 2 inches.....	15 "	1 25 " 10

Anthemis tinctoria . Yellow. May to September. 2 feet.....	\$ 20 each	\$1 75 per 10
The second named is the popular chamomile. Tinctoria is one of the best of perennials, flowering freely for several months.		
Anthericum liliago . Yellow. June. 1½ feet.....	15 "	1 25 " 10
Aquilegia chrysantha alba . White. July. 2 feet.....	20 "	
" glandulosa . Purplish White. June. 2 feet.....	15 "	
" vulgaris . Columbine, Purple. June. 2 feet.....	15 "	1 25 " 10
" Canadensis . Scarlet. May and June. 1 foot.....	15 "	1 25 " 10
" chrysantha . Yellow. June and July. 1½ feet.....	20 "	1 75 " 10
" cærulea . Blue. June. 1½ feet.....	20 "	1 75 " 10
" olympica . Purplish Red. June. 2 feet.....	15 "	1 25 " 10
" Skinneri . June. 3 feet.....	25 "	2 00 " 10
" truncata . Scarlet. July. 2 feet.....	25 "	2 00 " 10
Aquilegias, or Columbines as they are popularly called, are needed in all collections. They take care of themselves well and bloom profusely.		
Armeria maritima . Purplish Pink. May. 6 inches.....	25 "	2 00 " 10
" plantaginifolia . Rosy Pink, June to August. 1 foot.....	15 "	1 25 " 10
These are known as sea pinks. They grow in compact clumps, from which ascend the flower stalks. The first named is extremely useful for edging borders and beds, forming a pretty line of compact green. The flower stalks rise from 6 to 9 inches above the foliage.		
Asclepias incarnata . Rosy Flesh. August. 3 feet.....	15 "	
" tuberosa . Orange Yellow. August to September. 1 foot....	20 "	
Aster cordifolius . Pale Pinkish White. September and October. 2½ feet.....	15 "	1 25 " 10
" corymbosus . White. September. 3 feet.....	15 "	1 25 " 10
" ericoides . White. September and October. 2 feet.....	15 "	1 25 " 10

Aster novæ-angliæ. Purple, very showy. September and October. 5 feet.....	\$ 20 each	\$1 75 per 10
" preanthoides. Light Pink. September and October. 2 feet	15 "	1 25 " 10
" tartaricus. Light Purple. October. 4 feet.....	25 "	2 00 " 10
Asters are particularly valuable for the beautiful display they make in autumn. Of those named above, all are desirable, but Novæ-angliæ, Prenanthoides and Tartaricus are particularly fine.		
Astilbe Japonica. White. June. 1½ feet.....	20 "	1 75 " 10
" Thunbergii. White. July. 2 feet.....	20 "	1 75 " 10
The plume-like sprays of astilbes make them valued for out-door display as well as for pot culture, for which purpose florists find them so useful.		
Asperula tinctoria. White. July. 18 inches.....	15 "	1 25 " 10
Baptisia Australis. Blue. June and July. 3 feet.....	20 "	1 75 " 10
" tinctoria. Yellow. June. 2 feet.....	15 "	1 25 " 10
Bellis perennis. English Daisy, Snowball. May. 4 inches.....	15 "	
" " " Longfellow. May. 4 inches.....	15 "	
Betonica Orientalis. Pink. July. 1 foot.....	15 "	1 25 " 10
" officinalis. Pink. July. 1 foot.....	15 "	1 25 " 10
" rosea. Rosy Pink. July and August. 9 inches.....	15 "	1 25 " 10
Betonicas are showy plants, throwing their flower spikes well up above their foliage.		
Bocconia cordata. White. July. 4 feet.....	15 "	1 25 " 10
Boltonia glastifolia. White. August and September. 4 feet....	20 "	1 75 " 10
" latisquama. (See cut.) Deep Lilac. August and September, 4 feet.....	25 "	2 00 " 10
Both of these species are pretty, latisquama especially so. As a showy perennial we can particularly recommend it. It attracted much attention in our grounds the past season.		
Calamintha patavina. Purple. July and August. 1 foot.....	15 "	1 25 " 10

Boltonia latisquama.

Calamintha chinensis. Pink. July and August. 1 foot.....	\$ 15 each	\$1 25 per 10
Calimeris incisa. Blue. July and August. 1½ feet.....	25 "	2 00 " 10
A very pretty aster-like plant; new, and making a nice display for a month or two.		
Campanula grandiflora alba. White. July. 2 feet.....	25 "	2 00 " 10
" media fl. pl. Blue. July. 1 foot.....	15 "	1 25 " 10
" pulcherrima. Dark Blue. July. 2 feet.....	15 "	1 25 " 10
" rapunculoides. Blue. July. 1 foot.....	15 "	1 25 " 10
Campanulas are Canterbury Bells. All are pretty, and the large flowered ones, like grandiflora, are particularly fine.		
Centauria amara. Purple. July and August. 1 foot.....	15 "	1 25 " 10
" declinata. Purplish white. July. 1 foot.....	15 "	1 25 " 10
" macrocephala. Yellow. August. 1 foot.....	15 "	1 25 " 10
Chelone barbata. Scarlet. July. 2 feet.....	20 "	1 75 " 10
" glabra. white. August. 3 feet.....	25 "	
" Lyoni. Rosy Pink. August and September. 2 feet.....	25 "	
Barbata is one of the showiest plants in the border. Its bright, shining green leaves well set off the spikes of scarlet flowers.		
Chrysanthemum Pompon. Assorted named varieties. October and November. 2½ feet.....	15 "	1 25 " 10
These are the old style small flowered chrysanthemums, which are the <i>hadiest kinds</i> there are, and for this reason they are generally popular for general garden planting. In rich soil they bloom profusely and the flowers attain quite a fair size.		
Chrysopsis villosa. Yellow. August and September. 4 feet....	15 "	1 25 " 10
This chrysopsis makes a brave showing in the hot months of late summer. Its flowers are in great profusion.		
Chrysostemma tripteris. Yellow. August and September. 3 feet.....	15 "	1 25 " 10
Cirsium pannonicum. Pink. July to September. 4 feet.....	15 "	1 25 " 10
Cimicifuga racemosa. Snakeroot. White. August. 4 feet....	15 "	
Collinsonia Canadensis. Yellowish White. July. 3 feet.....	15 "	
Convallaria majalis. (Lily of the Valley.) White. May. 6 inches. Clumps.....	\$ 20 each	\$1 50 per 10 \$12 50 per 100
Convallaria majalis variegata. (Lily of the Valley.) White. May. 6 inches. Clumps.....	\$ 30 each	\$2 50 per 10
The variegated Lily of the Valley has the foliage striped with green and white.		
Coreopsis lanceolata. Yellow. June and July. 1½ feet.....	15 "	1 25 " 10
" grandiflora. Yellow. June and July. 1½ feet.....	15 "	1 25 " 10
The flowers of these coreopsis are produced on long stems, and being of good size they are very showy. They are valuable for cut flowers.		
Coronilla varia. Pinkish White. June. 1 foot.....	15 "	1 25 " 10
A half climbing plant. Producing its flowers in good sized heads. very pretty.		
Crucianella stylosa. Pink. July to September. 6 inches.....	20 "	1 75 " 10
" suaveolens. Pinkish White. August. 1 foot.....	15 "	
Cunila Mariana. Dittany. Lilac. September. 1 foot.....	15 "	
Dolphinsium elatum. Bee Larkspur. June and July. 2 feet....	20 "	1 50 " 10
" formosum. Larkspur, Blue. June to September. 2 feet.....	20 "	1 75 " 10
" grandiflorum. Dark Blue. June and August. 3 feet.....	20 "	1 75 " 10
Larkspurs are particularly beautiful flowers, their showy blue blossoms making a display which could not be obtained from any other plant.		
Dianthus deltoides. White. June. 4 inches.....	20 "	1 75 " 10

Dianthus cruentis. Red. June. 1 foot.....	\$ 15 each \$1 25 per 10
“ barbatus. Sweet William, Various. (See cut.) June. 1 foot	15 “ 1 25 “ 10
“ “ Double. Red. June. 1 foot.....	15 “ 1 25 “ 10
“ plumarius. Double Scotch Pink, Pink. June. 10 inches.....	20 “ 1 75 “ 10
“ “ “ White. June. 10 inches....	20 “ 1 75 “ 10
“ “ fimbriata. White. June. 1 foot.....	20 “ 1 75 “ 10
“ Sternbergii. Pinkish White June. 6 inches.....	15 “ 1 25 “ 10
Dianthus includes include pinks and Sweet Williams. Plumarius is the old-time Scotch pink. These pinks are noted for their sweet perfume, and the Sweet Williams for their gay colors.	
Dicentra eximia. Light Pink. June and August. 1 foot.....	20 “ 1 75 “ 10
“ spectabilis. Bleeding Heart, Pink. May and June. 1½ feet.	20 “ 1 75 “ 10
This is one of the showiest of perennials, and one often grown in pots for spring flowering.	
Digitalis ferruginea. Yellow. July. 1 foot.....	15 “ 1 25 “ 10
“ purpurea Fox-glove. Purple. July. 2 feet.....	15 “ 1 25 “ 10
For gloves, as these are called, have long been known as among the most useful of garden plants.	
Dracocephalum nutans alpina. Blue. May to July. 6 inches.....	20 “ 1 75 “ 10
A very pretty, spreading plant, soon covering a good deal of ground.	
Echinops exaltata. Bluish. July. 4 feet....	20 “ 1 75 “ 10
“ spinossissima. White. August and September. 2 feet.....	20 “ 1 75 “ 10
Epimedium roseum. Rose. May. 1 foot.....	25 “
Epilobium hirsutum. Rose. September. 3 feet.....	15 “ 1 25 “ 10
Erigeron bellidifolium. Lilac. May. 2 feet.....	15 “ 1 25 “ 10
Eryngium planum. Bluish. August and September. 1½ feet....	15 “ 1 25 “ 10
While the blossoms are not conspicuously beautiful, they are much visited by bees, and the very large leaves and peculiar flower heads make the plant attractive. In a large mass the odd coloring of the flowers makes it especially desirable.	
Funkia lancifolia. Blue. August and September. 1½ feet.....	20 “ 1 75 “ 10
“ ovata variegata. Lilac. August. 1 foot.....	25 “
“ Sieboldiana. Blue. July. 2 feet.....	25 “ 2 00 “ 10
“ sub-cordata. Whitish-blue. June and July. 1 foot.....	20 “ 1 75 “ 10
Day Lily is the popular name of Funkia. Their large leaves and showy flowers, and their hardiness, insure them room in all gardens. Lancifolia blooms later in the season than the others. They are sometimes used as edging for borders.	
Caillardia grandiflora. August. 1 foot.....	20 “ 1 50 “ 10
Calanthus nivalis. Snow Drop. April. 6 inches.....	15 “
Calium ruboides. White. July. 1 foot.....	15 “
Ceranium aconitifolium. Blue. June. 1 foot.....	15 “ 1 25 “ 10
“ ibericum. Blue. June. 1½ feet.....	15 “ 1 25 “ 10
“ sanguineum. (See cut page 74.) Deep Rose. June to September. 6 inches.....	20 “ 1 75 “ 10
These Geraniums are pretty and useful plants. Sanguineum is of a spreading nature, and is almost always in bloom.	
Ceum triflorum. Rose. April. 9 inches.....	20 “ 1 75 “ 10
Cladiolus communis. Purple. July. 1½ feet.....	15 “
Cllobularia vulgaris. Blue. April and May. 6 inches.....	15 “ 1 25 “ 10
Cypophila paniculata. White. June. 2 feet.....	15 “ 1 25 “ 10
Helianthus doronocoides. Yellow. July and August. 4 feet	20 “ 1 75 “ 10
“ giganteus. Yellow. August and September. 6 feet.....	20 “ 1 75 “ 10
“ Maximilianus. Yellow. October 5 feet.....	20 “ 1 75 “ 10

Helianthus mollis. Golden Yellow. September and October.

4 feet	\$ 20 each \$1 75 per 10
“ multiflorus plenus. Yellow. July to October. 4 feet	20 “ 1 75 “ 10

When large growing plants, to make a fine fall display, are wanted, these sunflowers are just the thing. As will be seen some one or the other is in bloom from July to October. Maximilianus blooms profusely, and is in great demand. Multiflorus is as double as a dahlia, for which flower it is often mistaken.

Dianthus barbatus.

Dianthus plumarius, fl. pl.

Heliopsis laevis Orange. August to October. 4 feet..... \$ 15 each \$1 25 per 10

A tall growing, composite plant, blooming profusely in the late summer and fall.

Helleborus niger. White. February. 6 inches.....	20 “
Hemerocallis fulva. Reddish-yellow. July. 3 feet	15 “
“ graminea. Orange. June. 1½ feet.....	15 “ 1 25 “ 10
“ rutilans. Orange Brown. June. 1 foot.....	20 “ 1 75 “ 10

These are closely allied to day lilies, and like them are much valued. The flower stems ascend well above the foliage, showing off the flowers to great advantage. Planted in masses as they often are, they make a fine display when in bloom, and at all times their deep green leaves are to be admired.

Heracleum giganteum. White. June. 6 feet.....	25 “
Heuchera sanguinea. Red. June. 1½ feet.....	25 “
“ Wheeleri. Greenish-white. May. 1½ feet.....	25 “ 2 00 “ 10
Hibiscus grandiflorus. Cream. July and August. 3 feet.....	25 “ 2 00 “ 10
“ incanus. Pink. August and September. 4 feet.....	20 “ 1 75 “ 10
“ militaris. Red and White. July and August. 3 feet.....	25 “ 2 00 “ 10
“ Moscheutos. White. July and August. 3 feet.....	25 “ 2 00 “ 10

Marsh mallows, as these are called, grow very strong, and produce very large flowers, resembling single Hollyhocks. They thrive either in dry or wet situations.

Hieracium stoloniferum. Lemon. June to August. 6 inches	20 “ 1 75 “ 10
“ tridentatum. Yellow. August. 1 foot.....	15 “
“ umbrosum. Yellow. July to September. 2 feet.....	20 “ 1 75 “ 10

The stoloniferum spreads quickly, soon forming a green mat, from which the heads of yellow flowers arise.

Hollyhock. Double White, Double Pink, Double Red, and Double Yellow, strong blooming plants.....	\$ 25 each	\$ 2 00 per 10
Our stock consists of the very best colors named above. The plants offered are all extra strong and will bloom this coming summer.		
Hydrophyllum Canadense. White. May and June. 1 foot..	15 "	1 25 " 10
" " purpureum. Purple. May		
and June. 1 foot.....	15 "	1 25 " 10
Iberis Gibraltarica. Hybrids. Light Purple. May. 6 inches..	20 "	
" sempervirens. (See cut.) White. June. 6 inches	20 "	1 75 " 10
The last is an evergreen candytuft, forming a low bushy plant. The heads of white flowers appear well above the foliage.		
" Tenorianum.	20 "	1 75 " 10
Incarvillea Kopmanni. August. 1 foot.....	25 "	
Iris Cengalti. Deep Purple. May and June. 1 foot.....	25 "	2 00 " 10
" florentina. White. May. 2 feet	20 "	1 50 " 10
" Germanica. In variety. Various. May and June. 1½ feet..	15 "	1 25 " 10
" laevigata. Various. June and July. 1½ feet.....	20 "	1 75 " 10
" Sibirica. Various. May and June. 1½ feet.....	15 "	1 25 " 10
" Virginica. Blue. May and June. 1½ feet.....	20 "	1 75 " 10
Irises are the well-know flags. Of various and beautiful colors, and doing well in most all situations. They are very popular. Planted in groups they make a fine display.		
Kitaibelia vitifolia. White. June to August. 5 feet.....	15 "	1 25 " 10
Lathyrus grandiflorus. Rose. June to August. 4 to 5 feet....	25 "	2 00 " 10
" sylvestris. Dull Pink. June to August. 2 feet.....	25 "	2 00 " 10
Lavendula vera. Lavender. Blue. August to October. 2 feet...	15 "	1 25 " 10
This is the true lavender, famed alike for its pretty flowers and its pleasant odor.		
Leucojum aestivum. White. April. 1 foot	15 "	
Liatris pycnostachya. (See cut.) Purple. July. 4 feet.....	15 "	1 25 " 10
A really beautiful flower, throwing up a long spike with flowers of a lilac purple color.		
" scariosa. Lilac. September.....	25 "	
" spicata. Rosy Lilac. August. 3 feet.....	25 "	
Lilium tigrinum. Tiger Lily. Orange. July. 5 feet.....	15 "	1 25 " 10

Geranium sanguineum.

Iberis sempervirens.

Liatris pycnostachya.

Lychnis Chalcedonica.

Lobelia cardinalis. Scarlet. September. 2 feet.....	\$ 20 each	\$ 1 50 per 10
A lover of damp places, where it makes a splendid display when in bloom.		
Lychnis chalcedonica. (See cut.) Scarlet. June to August.		
2 feet.....	15 "	1 25 " 10
" chalcedonica. Double Scarlet. June to August. 2 feet	20 "	1 75 " 10
" " " White " 2 feet.....	20 "	1 75 " 10
" flos-cuculi. " Rose. June. 1 foot.....	20 "	1 75 " 10
" viscaria. " " August 1 foot.....	20 "	1 50 " 10
The Lychnis, especially the chalcedonica varieties, make a fine display when in flower and they have more or less bloom for a long time.		
Lysimachia ciliata. Yellow. July to September. 1½ feet.....	15 "	1 25 " 10
" clethroides. White. July to September. 1½ feet.....	20 "	1 75 " 10
" verticillata. Yellow. July. 1 foot	15 "	1 25 " 10
" vulgaris. Yellow. July. 2 feet.....	15 "	1 25 " 10
These flowers are known as moneyworts. All make a good display when in bloom, especially the white one, clethroides.		
Lythrum salicaria. Purple. July. 3 feet.....	35 "	2 50 " 10
The rosy purple flowers of this plant are produced in great profusion.		
Malva alcea. Pink. June to August. 2 feet.....	15 "	1 25 " 10
Medicago prostrata. Yellowish. July and August. 8 inches..	15 "	1 25 " 10
Mentha rotundifolia. Mauve. July to September. 1½ feet....	15 "	1 25 " 10
" sylvestris. Mauve. July to September. 3 feet	15 "	1 25 " 10
Monarda fistulosa. Pale Pink. August and September. 2½ feet	20 "	1 75 " 10
" mollis. Pink. June and July. 1 foot.....	20 "	1 75 " 10
" purpurea. Purple. August and September. 2½ feet.....	20 "	
Monardas are known as bergamots, and are valued for their nice scented leaves, as well as for their flowers.		
Naumburgia thyrsoiflora. Yellow. July. 2 feet.....	15 "	1 25 " 10
A good plant for the forming of clumps.		
Nepeta betonicaifolia. Blue. July and August. 1½ feet.....	15 "	1 25 " 10
" Glechoma. Blue. July and August. 6 inches.....	15 "	1 25 " 10
" " variegata. July and August. 6 inches.....	15 "	1 25 " 10

Nepeta macrantha. Blue. July and August. 2 feet.....	\$ 15 each	\$1 25 per 10
Oenanthe peucedanifolia White. June. 1½ feet.....	15 "	1 25 " 10
Oenothera riparia. Yellow. July and August. 1 foot.....	15 "	1 25 " 10
" speciosa. Pink. June to August. 6 inches.....	15 "	1 25 " 10
" Youngii. Yellow. June to August. 1½ feet.....	20 "	1 75 " 10
This is the well-known "Evening Primrose." The plants bloom freely and are showy and fragrant.		
Opuntia oplocarpa. Yellow. June and July. 9 inches	20 "	1 75 " 10
" Rafinesquii. Yellow. June and July. 9 inches	20 "	1 75 " 10
" vulgaris. Yellow. June and July. 9 inches	20 "	1 75 " 10
There are many dryish places in a garden in which these hardy creeping cactuses would be well suited.		
Origanum vulgare Purplish white. July. 1½ feet.....	15 "	1 25 " 10
This plant spreads at the root, soon forming a bushy clump, fitting it for many situations.		
Pachysandra procumbens. Brownish White. April and May. 1 foot.....	15 "	1 25 " 10
" terminalis. Greenish White. May. 1 foot.....	25 "	2 00 " 10
The Pachysandra is evergreen. It flowers early, and is a favorite with bees.		

PÆONIES.

Our collection of Pæonies embraces many choice sorts, including some superior single flowered varieties which we have found desirable. The extra strong clumps offered by us will probably bloom this year

Double Rose.

" Red. Early.

" White.

Reevesii. Double pink.

Fragrantissima. Double pink.

Single White.

Pink.

Red.

35 cents each \$2 50 per 10 \$17 50 per 100

Extra strong clumps, 50 cents each \$4 00 per 10

Papaver Orientale. Poppy. Orange Red. June. 2 feet..... \$ 15 each \$1 25 per 10

The large, satin-like blooms of the poppy are well known, and the plants are always in demand.

" **Greenlandica.** Yellow. July and August. 1 foot..... 15 " 1 25 " 10

Pardanthus Chinensis. Yellow. June. 3 feet..... 15 " 1 25 " 10

Pentstemon Digitalis. White. June and July. 1½ feet..... 15 " 1 25 " 10

Phlox procumbens alba. White. May.....clumps, 20 " 1 75 " 10

" **rosea.** Rose. May..... " 20 " 1 75 " 10

" **striata.** Striped. May..... " 20 " 1 75 " 10

Phloxes do much towards making the garden gay throughout the season. The procumbens type are creeping sorts, and are known as Moss Pinks. They completely carpet the ground. The taller ones, known as Perennial Phloxes, are well known for their great beauty and variety of colors. If planted in rich moist ground they flower profusely in July and August, especially if mulched, to keep the roots cool. Groups of them on the lawn make an attractive display.

PHLOX DECUSSATA.

PERENNIAL PHLOX.

The Phlox is one of those hardy perennials that have been in use many years, and of late considerable attention has been given to its improvement. The varieties offered by us have been carefully selected for the beauty of their flowers,—several new sorts having been personally selected by one of our firm when in Europe last summer. Phloxes are particularly useful for planting among shrubbery beds,—they occupy but little room and bloom at a time when but very few shrubs flower.

Prices of named sorts..... \$ 15 each \$12 50 per 10 \$10 00 per 100

Embracement. Coppery Rose, Purple Eye.

Erckman Chatrian. Violet, Rosy Purple.

Jean d'Arc. White. Dwarf. Early Flowering.

Jourdan. Violet Rose, Large White Eye.

Lothair. Brilliant Salmon Rose.

Matador. Orange and Salmon.

Nellie Stewart. Pure White.

Pluton. Brilliant Carmine.

Puritan. Soft Rosy Pink.

Princess de Furstenburg. White Carmine Eye.

Saison Lierval. White. Centre Violet Rose.

Washington. White. Rosy Purple Centre.

White Lady. Large White.

William Robinson. Pale Rosy Salmon, Violet Centre.

Phlomis tuberosa. Purple. June and July. 4 feet \$ 15 each \$1 25 per 10

Phystostegia denticulata. Lilac White. July. 2 feet..... 15 " 1 25 " 10

" **Virginica.** Lilac White. July and August. 2 feet..... 15 " 1 25 " 10

Platycodon Mariesi. Blue. June to September. 1 foot..... 25 " 2 00 " 10

Plumbago Larpentæ. (See cut page 77.) Purplish Blue September and October. 1 foot.... 15 " 1 25 " 10

This is one of the best of late flowering plants, the pretty flowers being produced in great abundance.

Potentilla coccinea. Scarlet. June to August. 1 foot..... 25 " 2 00 " 10

" **lacunosa.** Yellow. June to August. 1 foot..... 15 " 1 25 " 10

" **recta.** Yellow. June to August. 1 foot..... 15 " 1 25 " 10

" **rupestris.** Yellow. June to August. 1 foot..... 15 " 1 25 " 10

Polygonatum multiflorum. White. May and June. 1½ feet. 15 " 1 25 " 10

Polygonum cuspidatum. (See cut page 76.) White. July to September. 5 feet..... 25 " 2 00 " 10

This plant produces great quantities of white flowers in late summer, and growing tall and spreading rapidly it soon makes a great display. Three or more plants in a clump form a great attraction:

Poterium sanguisorba. Red. July. 1½ feet..... 20 " 1 75 " 10

Primula alba plena. White. May. 4 inches 20 " 1 50 " 10

" **vulgaris.** Yellow. May. 4 inches 25 "

Psoralea sub-acaulis. Lilac. August. 1 foot..... 15 " 1 25 " 10

Pycnanthemum linifolium. White. August to October. 2½ feet.....	\$ 15 each \$1 25 per 10
" muticum. White. August to October, 2 feet	15 " 1 25 " 10
Pyrethrum roseum. Rose. June and July. 2 feet.....	20 " 1 75 " 10
This is one of the prettiest perennials of its season. The flowers are on long stems, just the thing for cutting for bouquets, etc.	
Rudbeckia incisa. Yellow. August to October. 1½ feet.....	15 " 1 25 " 10
" subtomentosa. Yellow. August to October. 3 feet.....	20 " 1 75 " 10
The large yellow flowers of Rudbeckias make them valuable for late summer display.	

Polygonum cuspidatum.

Ruta divaricata. Yellow. July. 1½ feet.....	\$ 15 each \$1 25 per 10
Santolina incana. Silvery foliage. 1 foot.....	20 " 1 75 " 10
Scutellaria albida. Blue and White. June to August. 1 foot...	15 " 1 25 " 10
Sedum Aizoon. White June. 6 inches.....	15 " 1 25 " 10
" atropurpureum. June. 1 foot.....	15 " 1 25 " 10
" album. Creeping White. July. 4 inches, clumps	20 " 1 75 " 10
" acre. Love-entangle, Yellow. July. 4 inches, clumps.....	20 " 1 75 " 10
" fabaria. (See cut, page 77.) Pinkish-white. September and October. 1½ feet.....	20 " 1 75 " 10
" hispanicum. Creeping White. July. 4 inches.....clumps,	20 " 1 75 " 10
" hybridum. Yellow. July. 4 inches.....	15 " 1 25 " 10
" Maximowiczii. Yellow. June and July. 1 foot.....	10 " 1 25 " 10
" rhodiola. Light Pink. August 6 inches.....	15 " 1 25 " 10
" Sieboldi. Pink. August. 6 inches.....	15 " 1 25 " 10
" spectabilis. Pink. September and October. 1½ feet.....	15 " 1 25 " 10
" speciosum. Pink. July. 4 inches.....	15 " 1 25 " 10

Sedum telephium. Light Pink. July and August. 1 foot \$ 15 each \$1 25 per 10

Sedums are exceedingly useful plants, flourishing in the driest places. The creeping sorts rooting as they grow, soon form a carpet of foliage where they are planted. For rock-work, mounds or other dryish places, they are very much in demand.

Sempervivum ruthericum. Pink. July. 4 inches	15 " 1 25 " 10
" tectorum. Pink. July. 4 inches.....	15 " 1 25 " 10
" Verlotii. Pink. July. 4 inches	20 " 1 75 " 10

These plants are of much the same nature as Sedums, and what has been said of them applies to these also.

Senecio Doria. Yellow. June and July. 2 feet.....	20 " 1 75 " 10
Silene macrocarpa. White. June and July. 2 feet.....	15 " 1 25 " 10
" Pennsylvanica. Pink. June and July. 1 foot.....	20 " 1 75 " 10
Silphium connatum. Yellow. July and August. 5 feet.....	15 " 1 25 " 10
" laciniatum. Yellow. August and September. 3 feet.....	15 " 1 25 " 10

The laciniatum is the compass plant. Both are large growing sorts, with large showy yellow flowers.

Solidago Canadensis. Yellow. September and October. 4 feet.	15 " 1 25 " 10
" cæsia. Golden Yellow. September and October. 3 feet.....	20 " 1 25 " 10
" latifolia. Yellow. October. 2 feet	20 " 1 25 " 10
" nemoralis. Yellow. September. 2½ feet.....	15 " 1 25 " 10
" rigida. Yellow. September. 3 feet.....	20 " 1 25 " 10
" serotina. Yellow. September. 3 feet.....	20 " 1 50 " 10

There are but few more beautiful flowers in Autumn than Golden Rods, as Solidago are called.

Stokesia Cyanea.

Spiraea aruncus. White. July and August. 4 feet.....	\$ 25 each	
" floribunda. White. May. 18 inches.....	20 "	\$1 75 per 10
" lobata. Rosy Pink. July and August. 2½ feet	15 "	1 25 " 10
" venusta. Deep Pink. July and August. 2½ feet.....	15 "	1 25 " 10
Stachys lanata. Pink. July and August. 1½ feet.....	20 "	1 75 " 10
This has large, silvery velvety leaves, making its common name, Rabbits' Ears, a most appropriate one. Its thick growth makes it useful for bordering flower beds, for which it is sometimes used.		
Statice plantaginifolia. Pink. June to September. 1½ feet...	20 "	1 75 " 10
Stokesia cyanea. Blue. (See cut p. 76) August and September. 1 ft.	25 "	2 00 " 10
This bears large blue flowers towards the close of summer in great abundance. The flowers are as large as good sized China asters, and quite as attractive. It is a valuable perennial plant for use either in an herbaceous bed or for setting among beds of shrubs—blooming at a time when few plants are in flower.		
Smilacina racemosa. White. May. 2 feet.....	20 "	1 50 " 10
Stylophorum diphyllum. Yellow. May. 1 foot.....	25 "	
Symphytum asperrium. Violet Blue June and July.		
2 feet.....	25 "	1 75 " 10
Tanacetum globiferum. Yellow. June and July. 1 foot.....	15 "	1 25 " 10
" niveum. White. June and July. 1 foot	15 "	1 25 " 10
Thalictrum angustifolium. Greenish Yellow. June to August.		
1½ feet.....	15 "	1 25 " 10
" medium. Greenish Yellow. June to August. 1 foot.....	15 "	1 25 " 10
" roseum. Rose. May and June. 1½ feet.....	15 "	1 25 " 10
" squarrosam. Greenish Yellow. May and June. 1 foot.....	15 "	1 25 " 10
Thermopsis fabacea. Yellow. May and June. 1 foot... ..	15 "	1 25 " 10
Thymus vulgaris. Garden Thyme. Pink. June to August. 9 inches.....	15 "	1 25 " 10
Tradescantia Virginica. Blue. (See cut page 38.) June to Sep-		
tember. 9 inches.....	15 "	1 25 " 10
" var. alba. White. June to September. 9 inches.....	20 "	1 75 " 10
" var. purpurea. Purple. June to September. 6 inches.....	15 "	1 25 " 10
Spiderworts, as these are called, are found growing wild on rocky, damp hillsides, where their pretty flowers make a pleasing picture, but they thrive in any good situation.		

Plumbago Larpenæ.

Sedum fabaria.

Vinca herbacea.

Tradescantia Virginica.

Tricyrtis hirta. Brown. September and October. 1½ feet.....	\$ 25 each	\$2 00 per 10
Trillium grandiflorum. Pinkish White. May. 6 inches.....	15 "	1 25 " 10
Tritoma uvaria. Red. August to October. 1½ feet.....	15 "	
Trollius Laxus. Yellow. March. 6 inches.....	20 "	
Tulipa Sylvestris. Yellow. April. 1 foot.....	20 "	
Vernonia angustifolia. Purple. August and September. 3 feet.	15 "	
" Arkansana. Dark Purple. September. 5 feet.....	20 "	
Veronica gentianoides. Mauve. May and June. 1 foot.....	20 "	1 75 " 10
" incana. Mauve. May and June. 1 foot.....	15 "	1 25 " 10
" montana. Blue. May and June. 6 inches	15 "	1 25 " 10
" officinalis. Mauve. June and July. 3 inches.....	15 "	1 25 " 10
" rosea. Rose. August. 1 foot.....	20 "	
" rupestris. Blue. June and July. 6 inches.....	15 "	1 25 " 10
" spicata. Blue. August. 3 feet.....	15 "	1 25 " 10
" villosa. Blue. June. 1 foot.....	15 "	1 25 " 10
Veronics have long been known as beautiful garden plants. The officinalis is a creeping species, thriving in dry places, and on dry banks where other plants will not live.		
Vesicaria sinuata. Yellow. May and June. 1 foot.....	15 "	1 25 " 10
Vinca herbacea. (See cut page 38). Purple. June to September.		
4 inches	15 "	1 25 " 10
As its name implies, this is herbaceous. Its pretty blue flowers are produced in great profusion.		
" minor, Periwinkle. Blue. May. 6 inches.....	15 "	1 00 " 10
" var. variegata. Variegated leaved. 6 inches.....	20 "	1 50 " 10
" var. alba. White. May. 6 inches.....	15 "	1 00 " 10
Viola cucullata. Blue. May. 6 inches.....	10 "	85 " 10
" var. picta. Striped. May. 6 inches.....	15 "	1 25 " 10
" pedata. Light Blue. May. 6 inches.....	15 "	1 25 " 10
" sagittata. Blue. May. 6 inches.....	15 "	1 25 " 10
" striata. Cream. May. 6 inches.....	15 "	1 25 " 10
The modest violet flowers please us all in the earliest days of spring, when they come forth to greet us. They do well either in the sunlight or in partial shade.		

FRUIT TREES AND SMALL FRUITS.

STANDARD APPLES.

We call particular attention to the extra-sized apples enumerated in this list. They will give every satisfaction to customers who are anxious to secure fruiting trees at the earliest possible time. There is no difficulty in transplanting these trees, as many suppose, and, if they are pruned more or less at the time of planting, and set in good, rich soil, they will make a stout growth the first year, and probably set fruit the second season. They can be packed in quite small bales, considering their size, and shipped to any distance without any danger of losses. We have frequently transplanted this sized tree without losing a single one, and this, too, when late in the spring.

American Golden Russett. One of the most delicious apples. Medium sized; dark yellow, sprinkled with russet, with a tinge of red on the exposed side. Flesh yellowish, very tender and juicy, with a rich spicy flavor. Winter. Extra heavy. \$1 00 to \$1 25 each.

Baldwin. Probably the best known apple now in cultivation. The fruit is large, bright red. Flesh crisp, juicy and rich. The tree is a vigorous grower, and very productive. Winter. \$50 to \$75 each.

Ben Davis. A very desirable variety, on account of its productiveness. Fruit large and very handsome, striped with red and yellow. It is of good quality, and the fruit can be kept throughout the winter. Winter. Extra heavy. \$1 00 to \$1 25 each.

Cornell's Fancy. A beautiful apple, much esteemed for table use. The tree is a vigorous grower and very productive. Fruit is of medium size, oblong; waxen yellow, shaded and splashed with crimson. Flesh white, tender, crisp and juicy, with a pleasant sub-acid flavor. Fall. Extra heavy. \$1 00 to \$1 25 each.

Duchess of Oldenburg. A sort that is very popular, because of its many excellent qualities. The tree is a strong grower and a young and abundant bearer. Fruit large, streaked with red and yellow. Flesh tender and juicy with a pleasant sub-acid flavor. September. \$50 to \$1 00 each.

Early Harvest. Taking into account its beauty, its excellent qualities for the dessert and for cooking, and also its productiveness, we think it one of the finest apples yet known. Fruit medium-sized, skin bright straw color when fully ripe, with a few faint white dots. Flesh very white, tender and juicy, crisp, with a rich, sprightly, sub-acid flavor. August. \$50 to \$1 00 each.

Fallwater. This is a very strong grower and enormously productive. Skin yellowish-green, shaded with dull red. Flesh greenish white, juicy, crisp, rather tender, pleasant sub-acid flavor. Of excellent quality. Winter. \$50 to \$1 00 each.

Fall Pippin. The Fall Pippin is a noble fruit, and is considered the first of Autumn apples in the Middle States, where its beauty, large size and its delicious flavor for the table or for cooking, render it very popular. Skin yellowish-green, with a tinge of brownish-blush on one side. Flesh white, tender and mellow, with a rich, aromatic flavor. Winter. \$50 to \$1 00 each.

Cravenstein. A German apple, considered to be one of the finest in that country, which reputation is fully sustained here, as it is unquestionably a fruit of first quality. It is very productive and an early bearer. Fruit large, bright yellow, and beautifully dashed and pencilled with light and deep red and orange. Flesh tender and crisp with a high-flavored, somewhat aromatic taste. Fall. \$50 to \$1 00 each.

Hubbardston Nonsuch. Fruit large, yellow, shaded and striped with red. Flesh tender, yellowish, crisp, juicy, pleasant, sub-acid, slightly aromatic. An excellent sort. Winter. \$50 to \$1 00 each.

Maiden's Blush. Fruit medium-sized, with a delicate, waxen appearance, pale lemon-yellow, with a brilliant crimson cheek. Flesh white, tender and pleasant, sub-acid. Fall. \$1 00 to \$1 25 each.

Red Astrachan. Tree an abundant and regular bearer. It is of good quality, and a handsome dessert apple. Fruit of medium size, almost entirely covered with deep crimson, with greenish yellow streaks. Flesh white, crisp, moderately juicy, with an agreeable, rich, acid flavor. Summer. \$50 to \$1 00 each.

Ridge Pippin. Yellow, slightly shaded, sprinkled with russett and crimson dots. Flesh yellowish, juicy, crisp, with a sweet, slightly aromatic flavor. Late winter. \$1 00 to \$1 50 each.

Roman Stem. Fruit of medium size, yellowish-white, sprinkled with patches of dark russett. Flesh tender, juicy, with a rich, pleasant, musky flavor. A good sort, and a very productive one. Winter. \$50 to \$1 00 each.

Rome Beauty. Fruit large, yellow, shaded and striped with bright red. Flesh yellow, tender, juicy, sprightly sub-acid. Winter \$1 00 to \$1 25 each.

Roxbury Russett. This is one of the best known and most popular sorts. The tree is a prodigious bearer, and the fruit keeps until late in the spring. Fruit medium-sized, dull green, covered with brownish-yellow russett. Flesh greenish-white, moderately juicy, with a rather rich, sub-acid flavor. Winter. \$1 00 to \$1 50 each.

Smith's Cider. We recommend this apple above all others for Eastern Pennsylvania. It is enormously productive and a regular bearer. Fruit medium sized, yellow, though almost covered with large red stripes and shades. Flesh white, tender and juicy, of a pleasant, mild, sub-acid flavor. Winter. \$1 00 to \$1 25 each.

Sweet Bough. A very fine apple, of best quality, perhaps only second to the Early Harvest. It is not quite as good for cooking, being too sweet, but it is an excellent table apple. Fruit medium sized, pale greenish yellow. Flesh white, very tender and crisp, with a rich, sweet, sprightly flavor. Tree bears abundantly. Summer. \$75 to \$1 25 each.

Wine Sap. Tree an early and abundant bearer. Fruit medium-sized, dark red, with a few streaks. Flesh yellow, firm, crisp, with a rich, high flavor. Winter. \$50 to \$1 50 each.

Yellow Transparent. An apple of somewhat recent introduction from Russia, but which has been found remarkably desirable in this country. It is a very early bearer, young trees in nursery rows frequently having fruit on them. The fruit is of medium size, pale yellow. Flesh yellowish white, tender, juicy, sprightly, sub-acid. Summer. \$75 to \$1 00 each.

York Imperial. Fruit red. Flesh yellowish, firm, juicy, pleasant, mild, sub-acid. The tree is a good bearer. We consider this to be one of the best apples for Eastern Pennsylvania. Early winter. \$1 00 to \$1 50 each.

CRAB APPLES.

(50 to 75 cents each.)

Red Siberian. Fruit small, yellow, with scarlet cheek. Bears early and abundantly, and can be depended on to bear regularly every year. September and October.

Transcendent. This sort is immensely productive. Fruit bright red. September and October.

Yellow Siberian. Fruit large, and of a beautiful golden yellow. September and October.

Van Wyck Sweet. Fruit large, yellow, shaded light red. Flesh tender and sweet. October and November.

APRICOTS.

(50 cents each. Extra sized, \$1 00 each.)

Breda. Small, round, dull orange, marked with red in the sun; flesh orange colored, juicy and rich. July.

Moor Park. One of the largest and finest apricots; yellow, with red check. Flesh orange, sweet and juicy. Very productive.

ASPARAGUS.

The plants we offer are not such as are usually sold by nurserymen and seedsmen, but are good, strong plants, three years old. These will be ready for cutting much sooner than smaller plants would. Nor do we dig them before they are needed. Consequently our plants are always fresh and produce good results. Price, \$1 25 per 100. \$8 00 per 1,000.

Conover's Colossal.

BLACKBERRIES.

(Strong canes, 75 cents per 10, \$5 00 per 100.)

Dorchester. An excellent, productive variety, and a vigorous grower. Fruit large, black, juicy, and of good quality. Ripens about August 1st.

Kittatinny. A strong grower; canes very hardy and productive. Fruit large, rich glossy black, moderately firm, juicy, rich, sweet, excellent. Ripens early and continues a long time. One of the most valuable sorts for general planting.

Lawton. An old favorite, esteemed for its productiveness and large size; delicious when fully ripe, but turns black in advance of ripening. Medium to late.

Wilson's Early. A hardy and productive variety. Fruit large, black, and very sweet. A very early sort.

Wilson Junior. Noted for its productiveness. There is no other blackberry that can compare with it in size and quality. Fruit large, luscious and sweet. Ripens earlier than its parent.

DEWBERRY.

The Dewberry is now planted in every garden, as the fruit ripens before the Blackberry. The Lucretia is an improved sort and of great merit. The fruit is large and good, having that sweet, juicy flavor peculiar to the wild sort. Should be treated the same as Blackberries.

Lucretia. Price, \$1 00 per 10.

CHERRIES.

Many planters fail in transplanting the Cherry, because they either do not prune the trees or they allow them to bloom the first year. Both exhaust the sap in the tree before the roots start out and produce a fresh supply. The Cherry should be pruned very much, and besides this, all the flower buds should be picked off. \$ 50 each. Extra size, \$1 00 to \$1 50 each.

Black Eagle. Fruit large, heart-shaped. Skin deep purple, or nearly black. Flesh deep purple, tender, with a rich, high flavored juice, superior to the old Black Heart. Ripens early in July.

Early Purple. An indispensable variety among the early sorts. It is a prolific bearer, and one of the first to ripen. Medium size, dark red, becoming purple at maturity. Flesh tender, purple and juicy, with a rich and sweet flavor. Early June.

Early Richmond. This is what is known as the Sour or Pie Cherry. It is largely planted on account of the large size of its fruit and its excellent quality. The tree is a prodigious bearer, rarely failing to produce a large and full crop. It does not grow quite as large as the Sweet Cherries, but it commences to bear at a younger age. Fruit rather above medium in size, dark red, almost black when fully ripe. Flesh juicy, rich, acid. Last of June.

Gov. Wood. A very productive variety and one of the most desirable. Fruit large, light yellow, shaded and marbled with bright red. Flesh nearly tender, juicy, sweet, rich and delicious. Middle of June.

May Duke. An excellent variety, and very productive. Fruit large, dark red, juicy, sub-acid, rich. Ripens a long time in succession. June.

Rockport. A strong grower and a good bearer. Fruit large, bright red, shaded with pale amber. Flesh firm, juicy, sweet, rich, with an excellent flavor. Ripens early in June just before May Duke.

Schmidt's Bigarreau. This is one of the best varieties, and is largely planted on account of the very large size of the fruit and its excellent quality and its productiveness. Fruit deep black, flesh dark, tender, very juicy, fine flavor. July.

White Caroon. Similar to the old White Ox-Heart, but of much better quality. Fruit large, yellowish-white, firm and juicy.

Windsor. One of the best of the late varieties. Fruit large, liver-colored. Flesh remarkably firm and of fine quality. July.

Yellow Spanish. A very popular variety and very productive. Fruit large, pale yellow, with a bright red cheek. Flesh firm, juicy and delicious. End of June.

CURRANTS.

The Black Currant makes excellent tarts and preserves. The Cherry and the Versailles have large berries and bunches, and are very desirable. The fruit of Fay's Prolific is as large as Versailles, and it has a longer bunch. Price, \$1 50 per 10. \$10 00 per 100.

Black Naples.

Cherry. Red.

Versailles. Red.

White Grape.

Fay's Prolific. Red.

GOOSEBERRIES.

The Downing and Smith's Improved are more largely planted than any other sort, as they bear enormous crops every season. They are strong, vigorous growers and require no more than ordinary attention in the garden.

The Industry is one of the English sorts, which has been found to do well in this country if a little attention be given it. A moist, cool soil, somewhat shaded, exactly suits it, and by keeping a mulch of manure constantly around it on the surface of the ground and a few stones on this, it will be all that is necessary. Fruit large, red and is produced abundantly.

Downing. \$1 50 per 10. \$10 00 per 100.

Smith's Improved. \$1 50 per 10. \$10 00 per 100.

Industry. 25 each. \$2 00 per 10.

GRAPES.

BLACK VARIETIES.

(25 cents each. \$2 00 per 10. \$15 00 per 100.)

Barry. (Rogers' No. 43.) Bunch large, but rather short. Berries large, delicate, sweet and tender. Vine vigorous and productive. Ripens with Concord.

Clinton. This is valued for its lateness and its keeping qualities. Bunches small and very compact. It is not a sweet grape until very ripe. A vigorous grower, and is very useful where a strong and rapid growing vine is wanted for covering arbors or trellises.

Concord. Probably the best known and most largely grown of all grapes. Bunch large; berries sweet, tender and juicy. Medium early. It is very productive and always reliable.

Hartford Prolific. Hardy, vigorous and productive. Bunch large and rather compact. Berry large, black. Flesh sweet and juicy. Ripens among the earliest.

Moore's Early. A strong grower and moderately prolific. Bunch medium; berry large, flesh pulpy and of good quality. One of the first to ripen.

Wilder. (Rogers' No. 4.) A very hardy and vigorous vine, and a prolific bearer. It is a very good kind and ripens about the same time as the Concord. Bunch large, and compact; flesh tender, sweet and juicy.

Worden. Bunch large, compact; berries larger than Concord, and it ripens a few days earlier; excellent flavor.

RED, REDDISH AND PURPLE VARIETIES.

Brighton. Bunch large and well formed; berries above medium to large. Is of excellent quality and flavor. Ripens early, with the Delaware.

Delaware. This variety is probably as well known as the Concord. Bunches of medium size and compact; berries small, light red, sweet, with a musky aroma.

Lindley (Rogers' 14.) Very vigorous and productive; bunches medium size, compact, red; flesh tender, sweet and juicy; ripens before the Concord.

Salem (Rogers' 53.) Bunches large and compact; berries large and darker in color than Catawba; flesh tender, juicy and sweet; ripens after the Delaware.

WHITE VARIETIES.

Duchess. Bunch medium and compact; berries medium; skin thick; flesh tender, juicy, sweet, and in quality ranks as best. Very vigorous and productive; ripens before the Concord.

Lady. Bunch medium; berries large, with thin skin; pulp tender, sweet and pleasant; ripens early.

Martha. A very productive variety; bunch medium, not very compact; berries large; flesh similar to Concord, perhaps a little sweeter; ripens a few days earlier than Concord. An excellent white variety.

Niagara. This is perhaps one of the most popular grapes of recent production. It is a very strong grower and does not seem as much subject to mildew as many of the other sorts. We find it particularly desirable for Eastern Pennsylvania. Bunches large, compact; berries large; skin thin, but tough; flesh slightly pulpy, tender and sweet. It has somewhat of a foxy odor before it is fully ripened; but when mature this is lost to a great extent; ripens with the Concord.

Pocklington. This is a strong and vigorous grower; bunch medium; berry large; flesh pulpy, juicy, and of fair quality; ripens after the Concord.

NECTARINES.

(Price, each, 50 cents.)

Burmash.

Early Newton. Large, pale green, red in sun, flesh pale red at the stone; juicy and rich.

Stanwick. A particularly desirable variety for forcing under glass.

Pitmaston. Large; orange and yellow. Flesh orange, rich and fine. Freestone.

PEACHES.

Peaches do well in all situations, except low, damp ones, and even in these they succeed for a time. It is a mistaken idea some have that they do not thrive in this district. Few fruits give more satisfaction for the time it lasts than a peach tree. The tree should be well pruned when transplanted. Price, one-year old, \$ 25 each. \$2 00 per 10. \$15 00 per 100

Alexander Early. Medium size. Skin greenish-white, nearly covered with deep rich red. Tree very productive. One of the best early varieties. July.

Alpha. A newer sort, very early; of fine flavor. Flesh white. A good bearer.

Amsden's June. Medium size. Skin white, nearly covered with purple. Flesh juicy and sweet. July.

Crawford's Early. A very fine, large, yellow peach of excellent quality. Tree exceedingly prolific. One of the most popular sorts. Early September.

Crawford's Late. An excellent yellow peach; very large and productive. Late September.

Hale's Early. Medium size; flesh white, of good quality. Middle August.

Morris White. Medium size. Creamy white with red cheek. Flesh white and juicy. Middle of September.

Mountain Rose. Large, round. Skin white, partly covered with dark red; flesh white and very good. Early September.

Oldmixon. Large, white and red. Flesh pale and juicy. A very productive and valuable variety. Middle of September.

Rivers' Early. Large, creamy white with pink cheek. Rich flavor. One of the best of the early varieties.

Stump the World. A handsome red and white sort. Good size and quality. Very productive. End of September.

Susquehanna. A very large yellow peach; melting, rich and fine. Early October.

Troth's Early. Well-known in market as a good red, early sort. Early August.

Wager. A very late, lemon-colored peach of good quality. October.

Ward's Late. An excellent late peach. Flesh nearly white; excellent flavor. Last September.

STANDARD PEARS.

We call particular attention to the trees marked "bearing size." These are very large trees, transplanted one year ago, and which are from 1½ to 2 inches in diameter, and from 6 to 8 feet in height. They are fine stock and will give general satisfaction, when it is desirable to get fruit as soon as possible. These trees will transplant quite easily; but should be pruned more or less when moved. The trees marked at 75 cents and \$1.00 are very nice young trees, and as a rule are larger than those usually offered as extra stock by many nurserymen.

Bartlett Though an old variety, this is still probably the most popular of all, and is, perhaps, more largely planted than any other kind. It seems to bear abundantly in all locations, and can be relied on to bear more or less of a crop every year. Fruit large, skin thin, smooth, a clear yellow; flesh white, very fine grained. It is full of juice; sweet and high flavored. Last of August \$ 75 to \$1 00 each.

Belle Lucrative. This is an excellent fall pear. Medium size; pale yellowish green, slightly russet; flesh juicy, sugary and delicious. Last of September.

Beurre d'Anjou. This is one of the very best varieties; fruit large, greenish yellow, sprinkled with russet, sometimes shaded with pale crimson; flesh white, melting and juicy. This variety is one of the best for cultivating in Eastern Pennsylvania, and it can generally be relied on to bear a good crop. October. \$ 75 to \$1 00 each.

Buffum. A variety of the first quality. It is a strong, upright grower, bearing large, regular crops, and it is also a very handsome fruit. Fruit of medium size; skin fair, deep yellow, with bright blush on one side of the fruit; flesh white, buttery, sweet and of excellent flavor. September. 75 each. Extra sized, \$1 50 to \$1 75 each.

Clapp's Favorite. An excellent and very productive sort. Fruit large; skin thin, pale lemon-yellow with bright red cheek; flesh white, fine-grained, juicy and sweet. It should be gathered about one week before maturing and allowed to ripen in the dark. It ripens about two weeks before the Bartlett. August.

Duchess d'Angouleme. A well-known late pear, which is largely grown. It is one of the best for growing as a dwarf. Fruit large; yellow, spotted with russet; very juicy and of excellent flavor. Ripens in October, and will keep all winter. \$ 75 to \$1 00 each.

Flemish Beauty. An old variety but still very largely planted. Bears early and abundantly; fruit large; pale yellow, but mostly covered with patches of russet-brown; flesh yellowish-white, juicy, melting, very saccharine and rich. It should be gathered from the trees before it is matured and allowed to ripen in the dark. It has a remarkably fine flavor. September. Extra sized, \$1 50 to \$2 00 each.

Howell. A valuable and desirable variety; fruit rather large; light waxy yellow, thickly sprinkled with very small russet dots; flesh white, juicy, melting. We consider it one of the standard sorts. September. \$ 75 to \$1 00 each. Extra sized, \$1 50 to \$1 75 each.

Idaho. A new variety which has been highly recommended by all who have fruited it. It is described as being exceedingly productive. Fruit large and of excellent quality; skin golden-yellow, with russet spots; flesh white, fine grained, very tender and buttery, with a rich, subdued acid flavor. Ripens a month later than the Bartlett, and will keep for a long time. First of October. \$ 75 to \$1 00 each.

Kieffer. This is a very vigorous-growing sort, which seems to thrive everywhere. It is a handsome and regular bearer, producing fruit of large size; skin rich golden-yellow, sprinkled thickly with small dots; flesh slightly coarse, juicy and melting. It bears early, and the fruit can be kept for some time. It should not be allowed to over-bear, and to get the best quality of fruit, it should be ripened in the dark. \$1 00 each. Extra sized, \$1 50 to \$2 00 each.

Lawrence. A desirable winter variety. It is an early and abundant bearer. Fruit medium size; lemon-yellow, flesh white, juicy, melting and sweet. It can very easily be kept until the first of February. November \$ 75 each.

Louise Bonne. Fruit large; pale green, overspread with brownish-red in the sun; flesh white, very juicy and melting, with a rich and excellent flavor. It is a vigorous grower and very productive. September. Extra sized, \$1 50 to \$2 00 each.

Manning's Elizabeth. An exceedingly productive variety and one of the most desirable sorts of its season. Fruit of medium size; bright yellow, with red cheek; flesh white, juicy and very melting, with a saccharine, but very sprightly aromatic character. We consider it one of the best small pears and a beautiful dessert fruit. August. Extra sized, \$1 50 to \$2 00 each.

Seckel. The Seckel Pear is well known everywhere as one of the finest varieties ripening in its season. It is an abundant bearer, though it does not commence to bear as early as some other varieties. Fruit medium size; dull yellowish-brown, with russet red cheek; flesh white, very juicy and melting, with a rich, spicy flavor. It ripens gradually in the house from the end of August until the end of October. \$ 75 to \$1 00 each.

Sheldon. This bears abundantly. Fruit medium; skin greenish-yellow, mostly covered with light russet; flesh white, very juicy, melting and sweet. We consider it one of the best pears in its season and recommend it highly. October. \$ 75 to \$1 00 each. Extra sized, \$1 50 to \$2 00 each.

Vermont Beauty. Described as an abundant early bearer and very productive. Fruit of medium size; skin yellow, nearly covered with carmine; flesh melting, sprightly, juicy, and of the best quality. It has an excellent flavor. It is considered one of the most desirable of recent introductions. Is one of the most beautiful pears in its general appearance. October, \$ 75 to \$1 00 each.

Wilder. This is one of the newer varieties and is very highly recommended. It is a very abundant and regular bearer. Fruit of medium size; greenish-yellow, with red cheek; handsome; melting; sweet; pleasant. First of August. \$ 75 to \$1 00 each.

DWARF PEARS.

(Price, 50 cents each; extra size, 75 cents each.)

Bartlett. September.
Beurre d'Anjou. Winter.
Clapp's Favorite. Middle of August.
Duchess d'Angouleme. End of Oct.

Kieffer. October.
Lawrence. Winter.
Seckel. September and October.

PLUMS.

(Price, 75 cents each; extra size, \$1 00 to \$1 50 each.)

Bradshaw. Large and early; dark violet red; juicy and good. Very productive.
Imperial Cage. Medium size, greenish, juicy, rich and delicious. Tree, a strong grower and very productive. Middle of August.
Lombard. Medium size. Violet red. Flesh yellow and juicy. A strong grower and bears well. September.
Reine Claude. Large size, and of fine flavor; green. Hangs long on tree. Middle to end of September.
German Prune. Medium size, blue; juicy, rich, fine. Tree vigorous and very productive. September.

JAPANESE PLUMS.

The Japanese Plums are of comparatively recent introduction, but they have been found very successful and are now being largely planted. This is especially the case in Eastern Pennsylvania, where plums have hitherto almost universally failed. They are extremely productive, are of excellent quality, and the trees are very hardy and vigorous. Though they are more or less attacked here by the Curculio, it does not seem to injure them, and the fruit matures in perfect condition. Extra sized trees, \$1 00 to \$1 50 each.

Abundance. Very large; lemon-yellow, nearly over-spread with bright cherry; flesh orange-yellow, melting, rich and highly perfumed. It is an abundant and an annual bearer. August.
Burbank. Very similar to Abundance, but of deeper color, and ripening later in the season. Fruit large; color cherry-red, flesh deep yellow. Very sweet. Tree a vigorous grower, and usually begins to bear the second year after being transplanted. Last of August.
Willard. This is, perhaps, the best of the Japanese Plums. It is a vigorous grower. When ripe it is a dark red, bordering on purple. It will keep for a long time, not being inclined to decay. It is an extremely early variety, ripening a month before Abundance, and before any other plum, European or Native. For several years in Geneva, New York, it has ripened July 15 to 20th.

QUINCE.

The Quince needs good, moist, cool, well drained soil to grow in. Price, 50 cents each; extra sized, \$ 75 to \$1 00 each.

Meech's Prolific. Strong grower and productive, and commences to bear when quite young.

Orange. Though many new varieties have been introduced in recent years, this sort is still considered the best of all. It is a good grower, very productive, and the fruit is the largest size,

RASPBERRIES.

Raspberries are often said to run out, but with attention to enriching the ground, keeping the soil cool, and cutting out of weak canes, to strengthen the others, the good old kinds are as good yet as many of the newer ones. Although generally unnecessary, some think it pays to cover the canes in winter, either by tying with straw, or bending down and covering with a few inches of earth. Price of strong canes, \$1 00 per 10 ; \$6 00 per 100.

Caroline. Yellow. Canes very hardy.

Cuthbert. Hardy, sweet and productive. Deep crimson.

Cregg. We grow this for those who like our native black raspberries. This is an improved sort, and prolific bearer.

Hansell. Medium size, bright crimson, firm ; flavor fine ; canes vigorous, hardy and productive. Earliest of all.

Thompson's Early. Medium sized, red, vigorous and productive. Particularly desirable for its early ripening.

Turner. A very hardy sort, which makes it a great favorite with planters. Red, moderately firm, sweet and juicy, and of very good quality.

RHUBARB.

The Rhubarb likes a very deep, rich soil, and in planting plenty of manure should be used. The following sorts are all good. Price per strong root 25 cents.

Linnæus.
Prince Albert.

Kelway's Queen.

Magnum Bonum.
Victoria.

STRAWBERRIES.

For general cultivation, plants are best in beds. These should be four feet wide, and should contain three rows of plants. The two outside rows should be planted nine inches from the edges of the bed, and the inner one in the center of it, with the plants fifteen inches from each other in the rows. All runners should be removed as soon as formed, as much more fruit of larger size will result from this practice. Beds should be renewed about every two years.

When winter has fairly set in, say toward the middle of December, a slight covering of well rotted manure is very beneficial.

What may be thought of a certain variety of strawberry depends very much on soil and situation. Still some are nearly always good, and as such we would name Sharpless, Capt. Jack, Cumberland, Chas. Downing, Bubach and Jas. Vick. Price, ordinary runners, \$1 00 per 100. Potted plants, \$3 50 per 100.

Captain Jack.
Cumberland Triumph.
Sharpless.

Bubach.
Charles Downing.
Cydonia.

AZALEA MOLLIS.

Red and Yellow.

A bed of these plants creates one of the most attractive features on a lawn. They are easily grown, flower regularly and freely, and are, withal, one of the most satisfactory plants for this purpose. See page 30.

CARYOPTERIS MASTACANTHUS.

Introduced last year as a "novelty," and one that will not fail to be appreciated. Few shrubs are in bloom at its flowering period, which makes it the more useful. We have tested it during the past five years, and give it the highest recommendation. See page 31.

CORNUS FLORIDA RUBRO.

Red-flowered Dogwood.

This is still one of our best selling specialties. It has real merit, and its color (pink) is one that never fails to please.

We have sold as high as fifteen thousand plants in one year. See page 14, also colored plate.

DESMODIUM PENDULIFLORUM.

A most desirable plant which, unfortunately, is apt to be overlooked when customers are ordering. It is herbaceous, but perfectly hardy; a strong grower, especially as the roots acquire age. The pink, pea-shaped flowers, in the fall, attract unusual attention. See page 35.

JAPANESE MAPLES

are being more largely planted than ever before. Either as a specimen plant, or in groups, they produce a most striking effect. Our collection consists of the best varieties. See page 7, also colored plate.

MAGNOLIAS.

Our stock of Magnolias is exceptionally fine, particularly of the Chinese and Japanese sorts. The Hall's Japan is the dwarfiest grower, yet one of the most conspicuous when in bloom. For safety in transplanting we grow this one in pots. See page 20.

NEW CLIMBING ROSE.

"Crimson Rambler."

It is now so largely advertised that every one is familiar with it, but we call particular attention to the strong plants we offer. They are well-rooted, extra heavy, and will give satisfaction. The price for this size is extremely low. See pages 68 and 69.

HARDY PHLOX.

All choice varieties—some of them personally selected in France, last summer,—of the finest colors and most delicate markings. They are extremely useful for planting among shrubbery, as few other plants are in bloom at the period of their flowering. See page 75.

ROSA RUGOSA.

White and Red.

We make a specialty of these beautiful roses, which are in such demand for massing. Our stock is exceptionally fine and the prices are extremely low. See page 43.

MEEHANS' MONTHLY

is indispensable to the cultivator of plants and the student of Nature. It treats, in a concise manner, of **Wild Flowers** and **Nature** in general, **General Gardening** from a practical standpoint, **New and Rare Plants** and **Fruits**, the **Hardy Flower Garden**, **Fruits and Vegetables** in general, **Biography** and **Horticultural Literature**, etc.

The Senior Editor, **Thomas Meehan**, gives the reader the benefit of a life's experience in Horticultural pursuits, it having occupied his chief attention from boyhood.

The **special feature** of this work is the monthly colored lithograph of some Native Flower or Fern of the United States., executed by Messrs. Prang & Co., the well-known lithographers of Boston, which appears in each issue. A text of two pages, descriptive of the plant illustrated, accompanies each one. These plates are rightly acknowledged to be worth the entire price of the work; they are both artistic and botanically correct, and with their text, when bound, will prove a work of reference which will be of great value to any library.

We can safely say that no other horticultural publication occupies the field covered by **Meehans' Monthly**. In a measure, it is a continuation of Mr. Meehan's former work, "**The Native Flowers and Ferns of the United States**," which consisted merely of the same line of plates and the accompanying texts. The latter publication ceased only owing to the death of the publishers. The appreciation of the latter work is now best seen, by the way in which it is prized by those of the subscribers with whom we frequently come into communication. It is the intention of the publishers of **Meehans' Monthly** to continue this work until the entire Wild Flower and Fern flora of the U. S. has been covered. Can anyone doubt the extreme value of a complete set of these plates?

Aside from this main feature, which may be pronounced a botanical one, the practical amateur is in nowise neglected. Hints and notes on all topics are presented in a condensed yet readable form, many of which are not usually treated upon in other works.

We are convinced, particularly from the promptness and appreciative communications of subscribers when renewing their subscriptions, that anyone who is at all interested in Horticultural lines, in Wild Flowers or Nature in general, will find pleasure in this work, and we can only solicit a trial subscription to prove its worth. Those who possess **The Native Flowers and Ferns of the U. S.** and are not already subscribers to the present addition to that work, will find **Meehans' Monthly** most desirable. Those who possess the complete set of **Meehans' Monthly** will also appreciate the preceding work, if added to their library.

Subscription, \$2.00 per year in advance; \$1.00 for six months. Specimen copies free.
